## Agency Approvals

### Label Locations

Dolphin 6100 mobile computers meet or exceed the requirements of all applicable standards organizations for safe operation. However, as with any electrical equipment, the best way to ensure safe operation is to operate them according to the agency guidelines that follow. Read these guidelines carefully before using your mobile computer.

### Laser Light Label

---

### ***Safety & RF Approvals by Country:***

<b>Country</b>	<b>Safety</b>	<b>RF (Radio)</b>

\* Does not apply to IS4813 laser engine.

### ***R&TTE Compliance Statement—802.11b/g and/or Bluetooth***

Dolphin RF terminals are in conformity with all essential requirements of the R&TTE Directive (1999/5/EC).

This product is marked with **CE** 0983 in accordance with the Class II product requirements specified in the R&TTE Directive, 1999/5/EC. The equipment is intended for use throughout the European Community; PAN European Frequency Range: 2.402–2.480 GHz.

Restrictions for use in France are as follows:

- Indoor use: Maximum power (EIRP\*) of 100 mW for the entire 2.400–2.4835 GHz
- Outdoor use: Maximum power (EIRP\*) of 100 mW for the 2.400–2.454 GHz band & maximum power (EIRP\*) of 10 mW for the 2.454–2.483 MHz band.

**CE** The CE Mark on the product indicates that the system has been tested to and conforms with the provisions noted within the 2004/108/EC Electromagnetic Compatibility Directive and the 2006/95/EC Low Voltage Directive. Honeywell shall not be liable for use of our product with equipment (i.e., power supplies, personal computers, etc.) that is not CE marked and does not comply with the Low Voltage Directive.

For further information, contact:

Honeywell Imaging & Mobility Europe BV  
Nijverheidsweg 9  
5627 BT Eindhoven  
The Netherlands

---

## ***Laser Safety Label***

If the following label is attached to your product, it indicates the product contains an imager engine with a laser aimer (5300) or a laser engine (IS4813).

**Laser Eye Safety Statement:** This device has been tested in accordance with and complies with IEC60825-1: 1993+A1+A2 and 21 CFR 1040.10 and 1040.11, except for deviations pursuant to Laser Notice No. 50, dated June 24, 2007. LASER LIGHT, DO NOT STARE INTO BEAM, CLASS 2 LASER PRODUCT, 1.0 mW MAX OUTPUT: 650nm.

This class 2 laser product is in accordance with the requirements of IEC60825-1 Ed. 1.2 Clause 6.2(a).

Caution - use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

## ***LED Safety Statement***

The LED output on this device has been tested in accordance with IEC60825-1 LED safety and certified to be under the limits of a Class 1 LED device.

## ***CB Scheme***

Certified to CB Scheme IEC 60950-1.

## ***FCC RF Radiation Exposure Statement***

This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment.

## ***Dolphin RF Terminal—802.11b/g and/or Bluetooth***

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

If necessary, the user should consult the dealer or an experienced radio/television technician for additional suggestions. The user may find the following booklet helpful: "Something About Interference." This is available at FCC local regional offices. Our company is not responsible for any radio or television interference caused by unauthorized modifications of this equipment or the substitution or attachment of connecting cables and equipment other than those specified by our company. The correction is the responsibility of the user. Use only shielded data cables with this system.

In accordance with FCC 15.21, changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

**This device and its antenna must not be co-located or operating in conjunction with any other antenna or transmitter. To maintain compliance with FCC RF exposure guidelines for body-worn operation, do not use accessories that contain metallic components.**

**CAUTION!** Any changes or modifications not expressly approved by the grantee of this device could void the user's authority to operate the equipment.

### ***Canadian Compliance***

This Class B digital apparatus complies with Canadian ICES-003. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

To prevent radio interference to the licensed service, this device is intended to be operated indoors and away from windows to provide maximum shielding. Equipment (or its transmit antenna) installed outdoors is subject to licensing.

Cet appareil numérique de la Classe B est conforme à la norme NMB-003 du Canada.

### ***For European Community Users***

Honeywell complies with Directive 2002/96/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 27 January 2003 on waste electrical and electronic equipment (WEEE).

### ***Waste Electrical and Electronic Equipment Information***

This product has required the extraction and use of natural resources for its production. It may contain hazardous substances that could impact health and the environment, if not properly disposed.

In order to avoid the dissemination of those substances in our environment and to diminish the pressure on the natural resources, we encourage you to use the appropriate take-back systems for product disposal. Those systems will reuse or recycle most of the materials of the product you are disposing in a sound way.

The crossed out wheeled bin symbol informs you that the product should not be disposed of along with municipal waste and invites you to use the appropriate separate take-back systems for product disposal.

If you need more information on the collection, reuse, and recycling systems, contact your local or regional waste administration.

You may also contact your supplier for more information on the environmental performances of this product.

## Getting Started

### Out of the Box

Verify that your carton contains the following items:

- Dolphin 6100 mobile computer (the terminal)
- Main battery pack (3.7v, Li-Ion)
- AC power supply
- Localized plug adapters

*Note: Be sure to keep the original packaging in case you need to return the Dolphin terminal for service; see [Customer Support](#) on page 12-1.*

### Step 1. Install the Main Battery

The Dolphin 6100 is shipped with the battery packaged separate from the unit. Follow the steps below to install the main battery.

1. Release the strap making it convenient to reach the cover.
2. Remove the battery compartment cover by turning the cover's locks upward and removing the cover.
3. Insert the battery into the battery well with the labels facing upward.

4. Replace the cover with a hinging motion and turn the locks downwards.

*Note: The battery door must be installed prior to booting the unit.*

5. Replace the hand strap.

*We recommend use of Honeywell Li-Ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.*

## Step 2. Charge the Batteries

Dolphin 6100s ship with both the main battery pack and internal backup battery significantly discharged of power. Charge the main battery pack with the Dolphin charging cable until the LED turns green (red while charging). The average charge time for a fully depleted main battery is 5 1/2 hours. It takes less time if the battery has some charge.

1. Attach the appropriate plug adapter to the plug of the power cable.\*
2. Insert the plug into the appropriate power source.
3. Plug the Dolphin power cable into the **DC Power Jack** (see page 3-11) on the bottom end of the unit.

*Note: If you remove the battery pack or it completely discharges, there is a 30 minute window in which to insert a charged battery pack before the backup battery completely discharges. If your backup battery completely discharges, the contents of the RAM memory will be lost. If your backup battery is less than fully charged, there is a proportionally smaller window of time available.*

## LED Indicators

Red LED On	Charging
Green LED On	Battery is fully charged

\*This power cable can also be used to power the Dolphin 6100 while in the [Dolphin HomeBase/eBase Device](#) (see page 10-1).

 We recommend use of Honeywell peripherals, power cables, and power adapters. Use of any non-Honeywell peripherals, cables, or power adapters may cause damage not covered by the warranty.

 Ensure all components are dry prior to mating terminals/batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.

The power adapter on the power cable converts the voltage from the power source to 5 volts DC. Only power adapter cables from Honeywell convert the voltage appropriately. The power cable contains a plug adapter for each geography (US, UK, EU, etc.).

### Step 3. Boot the Terminal

The terminal begins booting as soon as power is applied and runs by itself. Do NOT press any keys or interrupt the boot process.

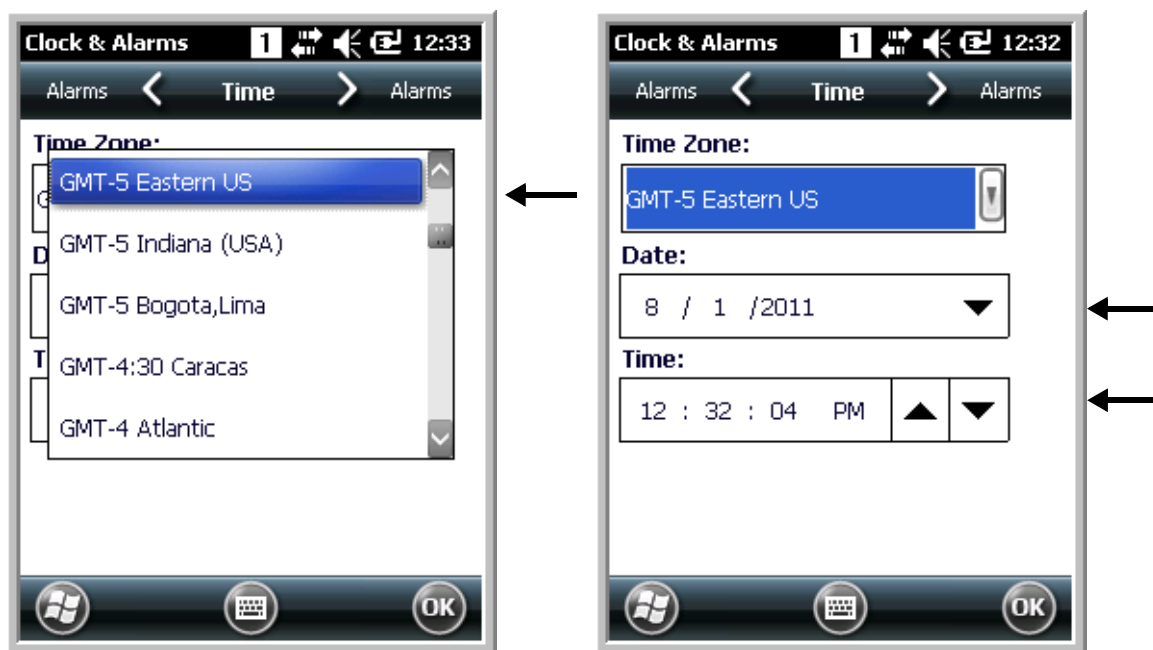

When the boot process is complete, the Desktop appears, and the terminal is ready for use.

### Step 4. Set the Time Zone, Time, and Date

On the Home screen, tap the line that displays the time and date.

The Clock Settings screen appears.

Tap the arrow to the right of the time zone to open the drop down menu. Select the appropriate time zone from the menu. Set the correct time and date in the remaining fields and tap **OK** to save.

---

## Home Screen

After the Dolphin terminal initializes the first time, you see the Home screen.

Tap  to reach the Start screen from the home screen.

Tap  to access the [Dolphin Wireless Manager Window](#) (see page 8-7) from the home screen.

For more information about the touch screen, see [Touch Screen Display](#) on page 3-2.

## Title Bar

The Title bar, located at the top of the screen, displays the active program, the status of various system functions, and the current time. Tapping on the title bar provides access to the Horizontal Scroll. The scroll provides access to additional programs and application screens. For additional information, see [Horizontal Scroll](#) on page 2-5.

Text here indicates  
the active program.

Icons here indicate the  
status of various system  
functions.

## Horizontal Scroll

Indicator	Meaning
	Synchronizing data
	The terminal could not synchronize data with the workstation via ActiveSync.
	New e-mail
	New text message
	New voicemail
	New instant message
	Ringer off
	A battery error has occurred. Replace the main battery pack with a Honeywell Li-poly or Li-ion battery pack.
	Battery is has a full charge
	Battery has a high charge
	Battery has a medium charge
	Battery has a low charge
	Battery has a very low charge and requires charging
	Terminal is running on external power. If a battery pack is installed, the battery is charging in the background.
	The terminal is not connected to external power. A battery is installed, but is defective; specifically, its charge level cannot be measured.
	Active network connection
	No active network connection
	Wi-Fi is on, but device is not connected
	Wi-Fi data call
	Pending alarm
	Bluetooth

---

The Horizontal Scroll, located at the top of most application windows, provides access to additional application screens. You can flick left or right on the scroll or tap each label on the scroll, until you get to the desired screen. Tapping a label to the left or right of the center item brings new labels into view.

*Note: Tap the Title bar to access the horizontal scroll if it is not visible on the screen.*

## ***Tile Bar***

The Tile bar is located at the bottom of application windows.

## ***Pop-Up Menus***

With pop-up menus, you can quickly choose an action for a selected item. To access a pop-up menu, tap and hold the stylus on the item name of the action you want to perform. When the menu appears, lift the stylus, and tap the action you want to perform.

Tap anywhere outside the menu to close the menu without performing an action.

## ***Selecting Programs***

To see the programs loaded on your terminal, tap  to access the Start Menu. To open a program, tap once on the program icon. To reposition an icon on the Start Menu, tap and hold the stylus on the icon, then drag the icon to the desired position.

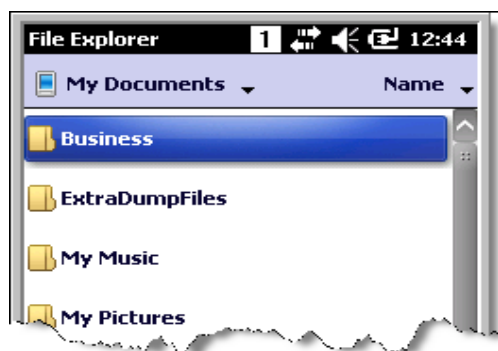

---

## File Explorer

You can also use the File Explorer to find files and organize these files into folders.

1. Tap  > File Explorer .

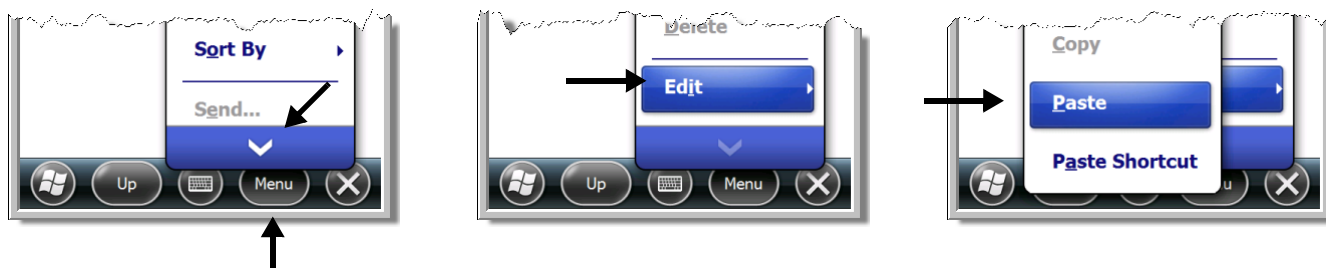

2. Tap the **Up** button at the bottom of the screen to move up one level in the directory.

3. You can move files in File Explorer by tapping and holding on the item you want to move, then tapping **Cut** or **Copy** on popup menu.
4. Navigate to the folder you want to move the file to, then tap and hold a blank area of the window.
5. Tap **Paste** on the pop-up menu.

*Note: If there is no blank space available in the window, tap **Menu** on the command bar, navigate to the end of the menu using the down arrow, then tap **Edit** > **Paste**.*

---

## ***Terminal Hardware Overview***

Dolphin 6100 terminals include a number of standard terminal configurations as well as charging and communication peripherals and accessories to maximize the efficiency of your application setting.

### ***Standard Terminal Configurations***

There are two standard Dolphin 6100 configurations: WPAN only and WPAN/WLAN. Both configurations include the following options; however, the WPAN/WLAN configuration has both a Bluetooth radio and an 802.11b/g radio.

<b>Dolphin 6100 WPAN and WPAN/WLAN</b>
<ul style="list-style-type: none"><li>• Microsoft Windows Embedded Handheld 6.5 Classic</li><li>• Marvell PXA 300 624MHz</li><li>• 256 MB RAM X 256 MB (non-volatile) Memory</li><li>• 28-key shifted alpha numeric keypad</li><li>• 2.8" 1/4 VGA transmissive active matrix color display)</li><li>• Standard Capacity: Li-ion battery: 3.7V / 2200mAh / 8.1 Wh or Extended Capacity: Li-ion battery: 3.7V / 3300mAh / 12.2 Wh</li><li>• 5300SR image engine with laser aiming or IS4813 laser engine</li><li>• (WPAN) - Bluetooth radio</li><li>• (WPAN/WLAN) - Bluetooth and 802.11b/g radio</li><li>• Dolphin power cable (included with each Dolphin 6100)</li></ul>

---

## Front Panel Features

### Scan/Decode LED

The LED lights red when you press the Scan trigger in scanning applications.  
The LED lights green when a scanned bar code is successfully decoded.  
The LED lights red while the main battery is charging.  
The LED lights green when the main battery charging has completed.  
The LED lights blue or red during soft and hard resets/  
The LED is user-programmable.

### Keypad

A 28-key shifted alpha numeric keypad is included on the unit.

### Microphone

The integrated microphone can be used for audio recording.

### Touch Screen Display

The display is a LCD (Liquid Crystal Display) with a 4-wire analog resistive touch screen. The 2.8" (1/4) VGA (Video Graphic Array) is transmissive active matrix color, backlit, and the resolution is 240 x 320; see [Backlight](#) on page 7-8. The touch panel is a 4-wire analog resistive touch.

Dolphin 6100s ship with a screen protector already installed over the touch screen lens to help prevent damage to the touch screen. Do NOT remove this screen protector before initial use. Honeywell recommends using screen protectors, especially for applications that require high volume interfacing with the touch screen. For more information, see [Using Screen Protectors](#) on page 3-3. You can purchase additional screen protectors by contacting your Honeywell sales representative.

---

For touch screen input, use the stylus included with the terminal or your finger. The method you choose depends on which one is most appropriate for your application. While there is a great deal of variation in different applications, you generally achieve greater accuracy with the stylus for buttons or icons that are close together.

*Use of objects, such as paper clips, pencils, or ink pens on the touch screen can damage the input panel and may cause damage not covered by the warranty.*

## **Using Screen Protectors**

Honeywell defines proper use of the terminal touch panel display as using a screen protector and proper stylus. Screen protectors maintain the ongoing integrity (i.e., prevent scratching) of the touch panel, which is why their use is recommended for applications that require a high to medium level of interface with the touch panel.

Honeywell continues to advocate the use of screen protectors on all Dolphin terminals. We recommend implementing a screen protector replacement program to ensure that screen protectors are replaced periodically when signs of damage/wear are noticeable. For general use, we recommend replacing the screen protector every thirty (30) days. However, replacement cycles vary according to the average level of touch panel use in your application.

Replacement screen protectors can be purchased directly from Honeywell. Contact a Honeywell sales representative for details.

Honeywell also mandates use of a proper stylus, which is one that has a stylus tip radius of no less than 0.8mm. Use of the Honeywell stylus included with the terminal is recommended at all times.

Honeywell's warranty policy covers wear on the touch panel for the first 12 months provided that a screen protector is applied and an approved stylus is used for the 12-month duration covered by the warranty.

---

## Removing the Screen Protector

Dolphin 6100s ship with a touch screen protector already installed. To replace the screen protector, you must remove the one already installed.

1. Press the red **Power** button to suspend the 28-key unit or press the **Blue** then **Z** (Power) keys to suspend the 52-key unit.
2. Using a strong, flat, plastic card (e.g., credit card) wedge the edge of the card under the existing screen protector. Catch the edge of the screen protector and pull it up and away from the touch panel.

*Note: If you have one, you can also use the small plastic squeegees designed for touch panels.*

3. Wipe the screen with a clean, non-abrasive, lint-free cloth.

*Note: Use ionized air, if available, to blow additional dirt or particles off the touch panel.*

## Installing Your Screen Protector

When installing a new screen protector, use a flat plastic card (e.g., credit card) to apply the screen protector smoothly and remove any air bubbles.

*Note: If you have one, you can also use the small plastic squeegees designed for touch panels.*

1. Press the red **Power** button to put the terminal in Suspend Mode on the 28-key Dolphin 6100 or press the **Blue** then **Z** (Power) keys on the 52-key Dolphin 6100.
2. Clean the touch panel thoroughly with a clean, non-abrasive, lint-free cloth. Make sure nothing is on the touch panel.
3. Release the left edge of the backing paper on the screen protector.

- 
4. Align the exposed edge of the screen protector along the left edge of the touch panel. Make sure that it lies flush with edges of the touch panel.

*Note: To reposition the screen protector, lift up gently and reapply.*

5. Use the card on top of the screen protector to smooth it out as you pull on the backing paper.

- 
6. Pull smoothly and evenly from left to right until the screen protector is applied. Press gently but firmly. Use the card as necessary to smooth out any air pockets or bumps after application.

7. Press the **Power** key to wake the terminal and check the touch panel with the stylus.

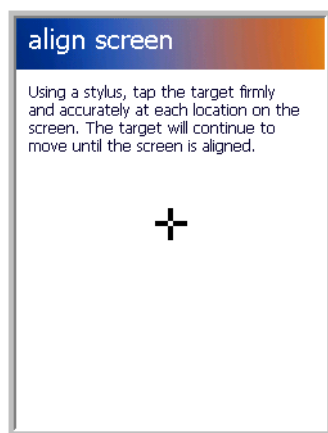

8. Verify that the screen accepts input from the stylus as usual. If not, re-apply the screen protector.
9. Press the red **Power** button to put the terminal back in Suspend Mode on the 28-key Dolphin 6100 or press the **Blue** then **Z** (Power) keys on the 52-key Dolphin 6100.
10. Clean the surface of the screen protector with a clean, non-abrasive, lint-free cloth.
11. Press the **Power** key to wake the terminal again.

- 
12. For maximum performance, recalibrate the screen. Tap  > **Settings** > **System** > **Screen** > **Align Screen**.

13. Tap **Recalibrate** and follow the instructions on the screen.

---

## Back Panel Features

### Hand Strap

The Dolphin 6100 comes with an adjustable, elastic hand strap. The strap is attached to the device with the two small screws. It is threaded through the slot on the bottom of the back of the unit.

Keep in mind that the hand strap covers the battery. When you want to replace the battery, you will need to adjust the hand strap accordingly.

### Finger Saddle

This is a slightly depressed and angled area of the back housing that is designed to cradle or “saddle” your finger while holding the terminal. This unique ergonomic design makes the terminal comfortable to hold and helps prevent you from accidentally dropping the terminal.

### Installed Battery

For information about installing the battery, see [Changing the Main Battery Pack](#) on page 3-13. For information about battery power, see [Battery Power](#) on page 3-12.

### Speaker

The integrated speaker sounds audio signals as you scan bar code labels and enter data, but emits no ambient noise on system activity (i.e., processor, memory access, radio traffic, etc.). The speaker can also be used for playing sounds (e.g., WAV or MP3 files).

The speaker meets the following SPL levels at 40cm:

- 500Hz–67db
- 1KHz–72db
- 4KHz–72db

### Stylus

Dolphin 6100 terminals ship with a stylus inserted in a loop on the hand strap. Store the stylus in the hand strap when you’re not using it.

---

## Left Side Panel Features

### Side Button

There is a button like this on both side panels. You can use the Program Buttons option to change the functionality of the side buttons. Tap  > **System > Settings > Program Buttons**.

### Side Door

The rubber door on the left side panel provides access to the Micro SD slot.

When closed, the side door seals the terminal from moisture and particle intrusion thus preserving the terminal's environmental rating.

## Installing Memory Cards

The Dolphin 6100 supports Micro Secure Digital (SD) memory cards. 2GB and 4GB cards have been tested for reliability. Please check the current price guide for available qualified card options.

To install an SD card:

1. Press Power key to put the terminal in suspend mode; see Suspend Mode on page 3-16.
2. Open the access door on the left side.
3. Insert the SD card with the label facing upward.

*Note: To remove an installed SD card while the access door is open, tap on the edge lightly to unlock the card; the card pops out just enough for you to grab its edge and to pull it out.*

4. Replace the access door.

The rubber door is required for 1) proper functioning of the SD card and 2) preserving the environmental rating for water sealing. Do not remove the rubber door.

*Note: Do not use the terminal when the access door is open. When this door is fastened securely and properly, the memory interface is sealed against moisture and particle intrusion, read/write data is stored securely, and the terminal's environmental rating is preserved.*

5. Tap the Power key to resume operation.
6. To verify that the operating system recognizes the new memory card, open Windows Explorer and navigate to My Device\Storage Card.

---

## Right Side Panel Features

### Headset Jack

The rubber door on the right side panel provides access to the headset jack. This is a 2.5mm audio jack that supports a headset with a mono speaker and microphone.

When closed, the side door seals the terminal from moisture and particle intrusion thus preserving the terminal's environmental rating.

### Side Button

There is a button like this on both side panels. You can use the Program Buttons option to change the functionality of the side buttons. Tap  > **System > Settings > Program Buttons**.

## Top Panel Features

### Imager or Laser Aperture Window

The angled image engine or laser engine reads and decodes most popular bar code symbologies and takes images like a digital camera (image engine only). For more information, see [Using the Image Engine](#) on page 5-1 or see [Using the Laser Engine](#) on page 6-1.

---

## Bottom Panel Features

### DC Power Jack

The DC power jack receives external power from the Dolphin power cable that is included in the box with the terminal. When connected to the Dolphin power cable, the terminal is powered and the main battery pack is charging.

### I/O Connector

The I/O mechanical connector is designed to work exclusively with Dolphin 6100 peripherals and cables. This connector powers the terminal, charges the main battery, and facilitates communication. This connector supports full speed USB 1.1 communication (up to 12 Mbps) and RS-232 communications with a maximum speed of 115Kbps and seven baud rate settings.

Through this connector, you can communicate with a host workstation via Microsoft ActiveSync; see [Connecting and Synchronizing the Terminal and Workstation](#) on page 8-9

The I/O connector supports the following signals:

- DC IN
- Transmitted Data
- Request To Send
- USB Host +5V
- USB Host D+
- USB Host D-
- USB Host Detect
- Clear To Send
- Received Data
- GND
- RS-232 Shutdown
- USB Client D+
- USB Client D-
- USB Client +5V

*Note: Signals referenced are for a DTE device.*

## Dolphin Peripherals/Accessories for the Dolphin 6100

The following items are sold separately and enhance your Dolphin 6100's capabilities.

---

### ***Dolphin HomeBase™ Device***

This charging and communication cradle supports USB and RS-232 communication, enabling your terminal to interface with the majority of enterprise systems. When a terminal is seated in a powered base, its main battery pack charges in an average of 5 1/2 hours for a fully depleted battery. It takes less time if the battery has some charge.

A spare battery may also be charged in the battery charging well behind the terminal.

For more information, see [Dolphin HomeBase/eBase Device](#) on page 10-1

### ***Dolphin eBase™ Device***

The Dolphin eBase is used to charge the main battery, to power the battery charging system in the terminal, and can be used to communicate data from the terminal to a PC/laptop via the Ethernet port.

A spare battery may also be charged in the battery charging well behind the terminal.

For more information, see [Dolphin HomeBase/eBase Device](#) on page 10-1

### ***Dolphin QuadCharger™ Device***

The Dolphin QuadCharger device, a four-slot charging station for Dolphin Li-Ion battery packs, can charge each battery in an average of 5 1/2 hours for a fully depleted battery. It takes less time if the battery has some charge.

For more information, see [Dolphin QuadCharger Device](#) on page 11-1.

### ***USB Communication Cable for the Dolphin 6100***

The USB Communication Cable for the 6100 is used when communicating between the terminal and a PC/laptop via the USB port. The cup-style 6100-USB cable slides onto the bottom of the device lining up with the connector. The cable unit includes an opening for the power cable. See [Connecting the Dolphin 6100-USB Communication Cable](#) (page 8-1).

### ***Li-Ion Battery Packs***

The Li-Ion battery pack provides the main power supply for the terminal. For more information, see [Battery Power](#) on page 3-12.

For information on how to purchase these items, contact a Honeywell sales representative.

### ***Battery Power***

The intelligent battery technology inside the terminal features two types of battery power:

- The main battery pack on the back panel (see [Main Battery Pack](#) on page 3-13)
- The backup battery located inside the terminal (see [Internal Backup Battery](#) on page 3-15)

Both batteries work together to prevent data loss when the terminal is used over long periods of time.

**Both batteries must be charged to full capacity before using the Dolphin 6100 for the first time!**

Charge the main battery pack with the Dolphin USB Charging/Communication cable until the LED turns green (red while charging). The average charge time for a fully depleted main battery is 5 1/2 hours. It takes less time if the battery has some charge.

---

## Main Battery Pack

 **Caution:** We recommend use of Honeywell Li-Ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.

There are two Li-ion battery packs available for the 6100:

**Standard Capacity:** Li-ion 3.7V/2200mAh/8.1Wh

**Extended Capacity:** Li-ion 3.7V/3300mAh/12.2Wh

The Li-Ion battery pack is the primary power source for the Dolphin terminal as well as the internal backup battery.

### Changing the Main Battery Pack

Before installing a battery pack, press the **Power** button on the 28-key Dolphin 6100 to put the terminal into [Suspend Mode](#) (see page 3-16) so that operations are suspended before removing the main power source. The Dolphin 6100 is shipped with the battery separate from the unit. You will need to loosen the hand strap, remove the battery door, insert the battery, and replace the battery door. Refer to the instructions included in [Installing the Main Battery](#) section (page 2-1).

*Note: The battery door must be installed prior to booting the unit.*

### Charging Options

When the battery is installed in the terminal, you can use any of the peripherals listed below to charge the battery.

- [Dolphin HomeBase/eBase Device](#) (see page 10-1)
- Dolphin Comm/Charge Cable; [Managing Main Battery Power](#) (see page 3-14). You may charge the device using the USB connection if you do not have a wall adapter. There are two options that allow either 100mA or 500mA of current over the USB connection. Access the option by selecting  > **Settings > System > Power > USB Charging** (see [Charging Terminal with USB Cable](#) on page 8-1).

To fully charge the Li-Ion battery before installing it in the terminal, use the

- [Dolphin QuadCharger Device](#) (see page 11-1) or insert the battery in the spare battery charging well in the back of either the Dolphin HomeBase or Dolphin eBase.

### Charging Time

The standard capacity 2200mAh Li-ion battery pack requires four hours to charge to full capacity, while the extended capacity 3300mAh pack requires six hours. It takes less time if the battery has some charge.

---

## Managing Main Battery Power

Data and files saved on the Dolphin terminal may be stored in RAM memory; therefore, maintain a continuous power supply to the terminal to help prevent data loss. When you remove a battery pack, insert another charged battery pack in the Dolphin. If the main battery pack is low, insert the terminal into a charging peripheral to power the terminal and begin recharging the battery.

*Note: If the main battery is low and the terminal is in Suspend Mode, pressing the **Power** button does **not** wake the Dolphin 6100 terminal; you must first replace the discharged battery with a fully charged battery or apply A/C power to the terminal.*

### Checking Battery Power

Power icons appear in the title bar at the top of the window. Tap on the battery icon to open the Power Properties or select  > **Settings** > **System** > **Power**. The Battery screen opens displaying the charge status of both the main and backup batteries.

## Storage Guidelines

To maintain optimal battery performance, follow these storage guidelines:

- Avoid storing batteries outside the specified range of -4 to 140° F (-20 to 40°C) or in extremely high humidity.
- For prolonged storage, it is recommended that the battery be at a 40% - 50% charge level, be removed from the device, and stored in a controlled temperature environment. Following these recommendations will maximize battery life.

### Guidelines for Battery Pack Use and Disposal

The following are general guidelines for the safe use and disposal of batteries:

- We recommend use of Honeywell Li-Ion battery packs. Use of any non-Honeywell battery may pose a personal hazard to the user.
- Ensure all components are dry prior to mating batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.
- Replace defective batteries immediately; using a defective battery could damage the Dolphin terminal.
- Never throw a used battery in the trash. It contains heavy metals and should be recycled according to local guidelines.
- Don't use a battery in any other manner outside its intended use in Dolphin terminals and peripherals.
- Don't short-circuit a battery or throw it into a fire; it can explode and cause severe personal injury.
- Excessive discharge damages a battery. Recharge the battery when your terminal indicates low battery power.

- 
- If you observe that the Honeywell battery supplied is physically damaged in some way, send it to Honeywell International Inc. or an authorized service center for inspection. Refer to the [Technical Assistance](#) (page 12-1) section of this guide.
  - Although your battery can be recharged many times, it will eventually be depleted. Replace it after the battery is unable to hold an adequate charge.
  - If you are not sure the battery or charger is working properly, send it to Honeywell International or an authorized service center for inspection.

### **Internal Backup Battery**

Located inside the terminal, the backup battery is a 3.7V Lithium Polymer battery.

The internal backup battery prevents the terminal from being reset when you remove the main battery pack. This backup battery retains RAM data and allows the real-time clock to remain operational for at least 30 minutes (if fully charged beforehand). If the terminal is left without the main battery pack for more than 30 minutes, the internal backup battery discharges and needs to be recharged to function according to specifications.

*Note: Even if the internal backup battery fails, data and programs stored in Flash memory (\\Honeywell\\AutoInstall) or on an optional SD card are not lost. However, the terminal automatically cold boots when you install a fully charged battery pack and you will need to reset the real-time clock.*

### **Charging**

The internal backup battery charges off the main battery pack and requires 2 hours charge time to backup RAM data for 30 minutes. You can begin using the Dolphin terminal after charging the main battery for an average of 5 1/2 hours for a fully depleted battery; however, the internal backup battery will continue to charge off the main battery. It takes less time to charge the main battery if the battery has some charge.

To ensure that the internal backup battery functions properly, maintain a consistent power supply for the first eight hours of terminal operation. This power supply can be external power (using a charging peripheral) or an installed, charged battery pack or a combination of both.

### **Charging Guidelines**

Follow these guidelines to maximize the life of the Dolphin 6100's internal backup battery under normal usage conditions:

- Keep a charged Li-Ion battery pack in the Dolphin terminal.
- Keep the Dolphin terminal connected to a power source when the terminal is not in use.

### **Resetting the Terminal**

**Soft Reset:** Using the stylus, press the **Reset** button. The screen turns white and the decode/scan LED flashes blue for approximately 10 seconds.

**Hard Reset:** Using the stylus press and hold the **Reset** button and then press and release the **Power** button. This resets RAM, reloads the OS, and resets the Real Time Clock.

### **Soft Reset (Warm Boot)**

A soft reset re-boots the terminal without losing RAM data, terminates all running applications, reloads the OS, and launches Autoinstall, which installs any CAB or REG files in the \\Honeywell\\AutoInstall folder.

---

You would perform a soft reset 1) when the terminal fails to respond, 2) after installing software applications that require a reboot, 3) after making changes to certain system settings, or 4) to install new CAB or REG files.

The desktop appears when the Soft Reset is complete.

### ***Hard Reset (Cold Boot)***

*Warning: A hard reset erases all of the data and applications stored in RAM memory, reloads the OS, resets the Real Time Clock (RTC), and launches Autoinstall, which installs any CAB or REG files in the \\Honeywell\\AutoInstall folder.*

Hard resets automatically launch a soft reset as part of the boot process if there are CAB files present.

You would perform a Hard Reset (instead of a Soft Reset) when you want to ensure the RAM memory is also cleared. RAM memory stores settings for Internet Explorer, Outlook, and other Microsoft applications.

*Note: Set the time and date after each hard reset to ensure that the system clock is accurate. Double-click the date on the Title Bar to open the Clock setting and set the time and date.*

### ***Suspend Mode***

Suspend Mode suspends terminal operation. The terminal appears to be “off” when in Suspend Mode. The terminal is programmed to go into Suspend Mode automatically when inactive for a specified period of time. You can set this time period in the Power setting.

To suspend operation, press the red **Power** button to put the terminal in Suspend Mode. To wake the device, press the **Power** button. You may also press the front scan key to wake a suspended device unless the battery door has been removed and replaced.

### ***Troubleshooting Suspend/Resume***

If the terminal does not wake when you press the **Power** button, the main battery might be too low to resume operation. To check, remove the battery and install a fully charged battery or connect the terminal to a Dolphin charging peripheral.

### ***Care and Cleaning of the Dolphin Terminal***

When needed, clean the image/laser aperture window and the LCD display with a clean, non-abrasive, lint-free cloth. The terminal can be cleaned with a damp cloth.

## ***Dolphin 6100 Technical Specifications***

<b>Operating System</b>	Microsoft Windows Embedded Handheld 6.5
<b>Development Environment</b>	Honeywell SDK for Windows Embedded Handheld 6.5
<b>Application Software</b>	Honeywell Power Tools and Demos
<b>Processor</b>	Marvell PXA 300 624MHz
<b>Memory</b>	256 MB RAM X 256 MB Flash
<b>Expansion Memory</b>	User accessible Micro SD memory card slot with SDIO support. Please check current price guide for available qualified card options.
<b>Display</b>	2.8 in. transmissive active matrix 65K color LCD with backlight, QVGA (240 x 320)
<b>Backlight</b>	LED
<b>Engine</b>	5300SR 2D imager engine with laser aimer or IS4813 1D laser engine
<b>Keypad</b>	28-key shifted alpha numeric with backlit keys
<b>Voice communication</b>	Voice-over-IP and Push-to-Talk ready
<b>Audio</b>	Built-in microphone and speaker, stereo headset jack
<b>Communication Interface</b>	Full speed USB 1.1 (12Mbps) from cradle (or I/O cable); RS232 (115 Kbps) from cradle
<b>Main Battery</b>	Li-Ion battery 3.7V / 3300 mAh / 12.2 Wh (includes extended battery door)
<b>Backup Battery</b>	100mAh Li-Polymer Ion (5300SR) or 145mAh (IS4813)
<b>Expected Hours of Operation</b>	3300mAh battery pack: 12 hours (5300SR)/11 hours (IS4813) (with scan every 2 seconds) Battery life varies with application and use case.
<b>Charging</b>	5V/3A (5300SR) and 5V/2A (IS4813) input through bottom access or USB/Serial connector
<b>Expected Charge Time</b>	3300mAh - 5 1/2 hours for a fully depleted battery
<b>Charging Peripherals</b>	AC wall adapter and Charger (PSC11R-050)/Communication Cable HomeBase—single-bay terminal charge/communicate eBase—single-bay terminal charge/communicate (via Ethernet connection) Quad Charger—four-slot battery pack charger (DSA-0421S-03 1)
<b>WPAN (standard)</b>	Bluetooth Class II (10 m) v2.0 Enhanced Data Rate (EDR) with on-board antenna. BQB certified
<b>WLAN (optional)</b>	Dual Mode 802.11 b/g (11 Mbps/54 Mbps) with internal antenna

<b>WLAN Security</b>	WEP, 802.1x, LEAP, TKIP, MD5, EAP-TLS, EAP-TTLS, WPA-PSK, WPA v2.0, and PEAP
<b>Operating Temperature</b>	14° to 122°F (-10° to 50°C)
<b>Charging Temperature</b>	32° to 104°F (0° to 40°C)
<b>Storage Temperature</b>	-4° to 158°F (-20° to 70°C)
<b>Humidity</b>	95% humidity, non-condensing
<b>Construction</b>	High impact resistant PC/ABS housings Magnesium alloy internal chassis with component shock mounts
<b>Drop</b>	4 ft. (1.2m) multiple drops to concrete, all axis, across operating temperature range
<b>Tumble</b>	500 3.3 ft (1.0m) tumbles (1000 drops)
<b>ESD</b>	<b>Air:</b> ± 15k Vdc <b>Direct:</b> ± 8k Vdc
<b>Environmental Sealing</b>	IP54 rating
<b>Dimensions</b>	175 mm long x 66 mm wide x 26.8 mm deep (6.8" x 2.60" x 1.06")
<b>Weight</b>	250 g (8.8 oz) including standard battery pack
<b>Scanner / Decode Capabilities</b>	5300SR 2D Imager with Adaptus Technology and Laser Aimer. Decodes all standard 1D, 2D, Postal, and OCR codes. IS4813 1D laser scanner. Decodes all standard 1D codes.
<b>Regulatory and Compliance</b>	<b>Safety:</b> UL60950-1, C-UL 60950, IEC 60825-1:1993+A1:1997+A2:2001, NOM-019, EN60950, CCC, PSE, <b>EMC:</b> FCC Part 15, Sub part B, Sub Part C, ICES-003, RSS 210, EN 55022 (CISPR 22) Class B, EN55024:1998, EN300 328, EN301 489-1, EN301 489-7, EN301 489-17, IEC 62209-2, SRRRC, AIRB, ANATEL, AS/NZS4268, COFETEL

## Using the Keypad

### Overview

### Navigation Keys

Located in the center of the keypad for easy access with either hand, the navigation keys enable you to move the cursor up and down lines and from character to character.

---

## Basic Keys

Name	Function
<b>ALPHA</b>	Toggles the keypad between alpha (upper and lowercase) and numeric modes. The 'A/a/1' indicator on the Title Bar changes accordingly.
<b>Backspace (BKSP)</b>	Backspace moves the cursor back one space. If you are typing text, a character is deleted each time you press the backspace key.
<b>Control (CTRL)</b>	Modifies the next key pressed to type specific characters (e.g., pressing <b>CTRL</b> and a "2", types an "@" sign.
<b>Escape (ESC)</b>	Cancels an action and returns to the last action. For example, if you select the Bluetooth icon on the Home screen and go to the Wireless Manager page and then press ESC, you will return to the Home screen.
<b>Enter (ENT)</b>	Performs the same function as the Enter key on a workstation.
<b>Power</b>	Suspends and resumes the terminal.
<b>Scan</b>	Activates the engine to scan a bar code or take an image.
<b>Space (SP)</b>	Moves the cursor one space forward. If you are typing text, it moves the text one space forward as well.

## Alpha/Numeric Modes

The keypad defaults to numeric mode. Use the **ALPHA** key to toggle between numeric and alpha modes. Pressing the **ALPHA** key locks the keypad in numeric mode, alpha mode (lowercase), or alpha mode (uppercase).

The Title Bar on the screen displays an icon indicating the alpha/numeric status of the keypad.

## Alpha Indicators on the Number Keys

Each number key displays the characters typed when you press that key in alpha mode.

Note that when typing in alpha mode on the Dolphin 6100, you must use the same multi-press method you would use when typing letters on a phone keypad. Each key press types the next letter in the sequence as displayed by the alpha indicator.

---

## Function Key Combinations

The Function key (FUNC) modifies the next key pressed to perform specific functions. The keypad is color-coded in blue to indicate these key combinations.

*Note: The color-coded indicators are located **below** each key.*

Key Combination	Function
<b>FUNC + 1</b>	F5
<b>FUNC + 2</b>	F6
<b>FUNC + 3</b>	F7
<b>FUNC + 4</b>	Toggle the wireless radio on and off
<b>FUNC + 5</b>	Increase screen brightness
<b>FUNC + 6</b>	Increase volume
<b>FUNC + 7</b>	Tab
<b>FUNC + 8</b>	Decrease screen brightness
<b>FUNC + 9</b>	Decrease volume
<b>FUNC + .</b>	Start menu
<b>FUNC + 0</b>	Delete
<b>FUNC + SP</b>	Align the screen (Press ESC to exit)

---

## CTRL Key Combinations

The Control key (CTRL) modifies the next key pressed to type specific characters. The keypad is color-coded in yellow to indicate these key combinations.

*Note: The color-coded indicators are located **below** each key.*

Key Combination	Function
CTRL + 1	!
CTRL + 2	@
CTRL + 3	#
CTRL + 4	\$
CTRL + 5	%
CTRL + 6	^
CTRL + 7	&
CTRL + 8	(
CTRL + 9	)
CTRL + .	- (minus)
CTRL + 0	*
CTRL + SP	+ (plus)

## Program Buttons

Buttons can be programmed to execute different functions using the Program Button program in the Control Panel. The following buttons on the 28-key keypad are programmed for the listed function.

Key Combination	Function
F1	ActiveSync
F2	Calendar
F3	Contacts
F4	Scandemo

## Using the Image Engine

### Overview

The Dolphin 6100 houses a compact image engine using Adaptus™ Imaging Technology that instantly reads all popular 1D and 2D bar codes and supports omni-directional aiming and decoding. The image engine can also capture digital images, such as signatures and pictures.

### Available Image Engines

The Dolphin 6100 can be equipped with a 5300 Standard Range (5300SR) image engine (depending on the configuration purchased).

### Depth of Field

#### 5300 Standard Range (5300SR)

	<b>8.3 mil Linear</b>	<b>10 mil PDF417</b>	<b>13 mil UPC</b>	<b>15 mil Data Matrix</b>	<b>15 mil QR</b>	<b>35 mil MaxiCode</b>
<b>Working Range*:</b>	(.020cm)	(.025cm)	(.033cm)	(.038cm)	(.038cm)	(.089cm)
<b>Near</b>	3.5 in. (8.9cm)	3.1 in. (7.9cm)	2.1 in. (5.3cm)	2.3 in. (5.8cm)	3.1 in. (7.9cm)	2.0 in. (5.1cm)
<b>Far</b>	7.6 in. (19.3cm)	9 in. (22.9cm)	13.2 in. (33.5cm)	10.2 in. (25.9cm)	8.8 in. (22.4cm)	13.0 in. (33cm)

\*Data characterized at 23°C and 0 lux ambient light.

---

## ***Supported Bar Code Symbolologies***

<b>Symbology Type</b>	<b>Symbology Name</b>
<b>1D Symbolologies</b>	Codabar Code 3 of 9 Code 11 Code 32 Pharmaceutical (PARAF) Code 93 Code 128 EAN with Add-On EAN with Extended Coupon Code EAN-13 GS1 Databar Interleaved 2 or 5 Matrix 2 of 5 Plessey PosiCode Straight 2 of 5 IATA Straight 2 of 5 Industrial Telepen Trioptic Code GS1-128 UPC and UPC-A
<b>2D Symbolologies</b>	Aztec Code 16K Composite Data Matrix Grid Matrix GS1 Databar Han Xin MaxiCode OCR PDF417 QR Code

---

## Activating the Engine

When a scanning application is open, press the **Scan** key to activate the image engine.

## Using Demos

Dolphin Demos are software utilities loaded on Dolphin terminals that demonstrate the advanced features of the terminal. There are two Demos that feature the image engine: Image Demo and Scan Demo.

To access these demos, tap  > **Demos**.

- Select **Scan Demo** to verify decoding, or
- Select **Image Demo** to verify imaging (not available on device using the IS4813 laser engine).

## Decoding

The Dolphin terminal supports two types of image decoding: Full-area imaging and Advanced Linear Decoding (ALD).

### Full-area Imaging

Full-area imaging means that the Dolphin terminal supports omni-directional aiming, meaning that a positive read can be obtained from many positions. For details, see [Omni-Directional Scanning Positions](#) on page 5-4.

### ALD

ALD provides fast reading of linear (1D) and stacked linear bar codes (PDF417). For the best read, the aiming pattern should be centered horizontally across the bar code. When ALD is enabled, the reader does not read matrix or postal codes.

## To Decode a Bar Code

1. Tap  > **Demos** > **Scan Demo**.
2. Position the Dolphin terminal over one of the sample bar codes on page 5-3. A range of 4-10 inches (10-25 cm) from the bar code is recommended.
3. Project the aiming brackets by pressing and holding the **Scan** key. The Scan LED lights red.
4. Center the aimer crosshair over the bar code. The aiming beam should be oriented in line with the bar code to achieve optimal decoding; [Omni-Directional Scanning Positions](#), page 5-4
5. When the bar code is successfully decoded, the decode LED lights green and the terminal beeps.

## Sample Bar Codes

You can use the following bar codes to verify decoding:

Sample 128

Code 128

Sample PDF417

PDF417 Test Message

---

## Omni-Directional Scanning Positions

The high-vis aiming pattern frames the bar code to provide you with the best scanning performance.

*Note: To achieve the best read, the aiming beam should be centered horizontally across the bar code.*

The aiming pattern is smaller when the terminal is held closer to the code and larger when the terminal is held farther from the code. Symbolologies with smaller bars or elements (mil size) should be read closer to the unit whereas larger bars or elements (mil size) should be read farther from the unit.

## Capturing Images (5300 Engine only)

The image-capture process is an intuitive, split-second operation for experienced users. By following basic guidelines, however, new users can easily develop their own technique and, with practice, quickly learn to adapt to different application environments.

### Image Preview

When the imaging process is initiated, the touch screen displays a preview of the object. This is a live video image of what the imager is currently viewing and has a slightly degraded appearance compared to the captured image. This is normal; the captured image has a higher resolution.

### File Formats

The Dolphin terminal is capable of saving images in a number of industry-standard file formats (BMP, JPG and PNG). The default file format for images is a grayscale BMP.

### File Size

Digital images have a maximum image size of 640 x 480 pixels and may have up to a 256 grayscale image definition. The image quality and related file size are determined by the data compression method used by the software application used to take the image. The average size of the image file is approximately 4-8K. However, the size of the image depends on image content; the more complex the content, the larger the file size.

## Taking an Image

1. Tap  > **Demos > Image Demo.**
2. Point the Dolphin terminal at the object.
3. Press the Scan key to activate the engine. The touch screen displays a preview of the object.
4. Adjust the terminal's position until the preview on the screen is as you want it to appear in the image.
5. Hold the terminal still and release the Scan key.  
The touch screen flashes, and the captured image appears on the screen.

- 
6. By default, the image is saved to the My Documents folder in My Device.  
To save the image to another location, tap **File > Save As**.

### *High-Vis Aiming Pattern*

If your Dolphin terminal is configured with the 5300SR imager, you can enable the aiming pattern for imaging in the Image Demo application.

1. Tap  > **Demos > Image Demo > Setup menu > Aimer**.
2. The aiming pattern is now enabled for imaging.

### *Uploading Images*

Image files can be transmitted to a host workstation via the following methods. Refer to the [Communication](#) or [Working with the Bluetooth Radio](#) chapters.

- Microsoft ActiveSync and a Dolphin communication peripheral
- Wireless radio: 802.11b/g and/or Bluetooth

---

## Using the Laser Engine

### Overview

The Dolphin 6100 (IS4813 laser version) contains a laser diode that emits a beam toward an oscillating mirror that scans through the code and the reflected light is bounced off of two mirrors back to the collector. The 6100 Laser reads all popular 1D bar codes.

### Available Laser Engines

The Dolphin 6100 can be equipped with an IS4813 laser engine (depending on the configuration purchased).

### Depth of Field - IS4813

	5.2 mil	7.5 mil	10.4 mil	13.0 mil	19.5 mil
<b>Working Range*:</b>	(25mm)	(114mm)	(160mm)	(204mm)	(225mm)
<b>Near</b>	2.75 in. (70mm)	2.25 in. (57mm)	2.00 in. (50mm)	2.00in. (50mm)	2.95 in. (75mm)
<b>Far</b>	3.75 in. (95mm)	6.75 in. (171mm)	8.25 in. (210mm)	10.00 in. (254mm)	11.81 in. (300mm)

\*Data characterized at 25°C under typical indoor lighting.

### Supported Bar Code Symbolologies

Symbology Type	Symbology Name
<b>1D Symbolologies</b>	China Post Codabar Codablock F Code 3 of 9 Code 11 Code 16 Code 32 Pharmaceutical (PARAF) Code 49 Code 93/93i Code 128 EAN-8 EAN-13 GS1 Composite GS1 Databar GS1 Databar Interim Coupon Bar Code GS1-128 ISBT 128 Interleaved 2 of 5 Korea Post Label Code Matrix 2 of 5 MSI Plessey PosiCode Straight 2 of 5 IATA Straight 2 of 5 Industrial TCIF Linked Code 39 (TLC39) Telepen Trioptic Code UPC, UPC-A, UPC-E

---

## ***Activating the Engine***

When a scanning application is open, press the Scan key to activate the laser engine.

## ***Using Demos***

Dolphin Demos are software utilities loaded on Dolphin terminals that demonstrate the advanced features of the terminal.

To access these demos, tap  > **Demos**.

- Select **Scan Demo** to verify decoding, or

## ***Decoding a Bar Code***

1. Tap  > **Demos** > **Scan Demo**.
2. Position the Dolphin terminal over one of the sample bar codes on page 6-2.  
A range of 4-10 inches (10-25 cm) from the bar code is recommended.
3. Project the aiming beam by pressing and holding the **Scan** key. The Scan LED lights red.
4. Center the aimer beam horizontally over the bar code and highlight all of the vertical bars of the bar code. The aiming pattern is smaller when the terminal is held closer to the code and larger when the terminal is held farther from the code. Symbologies with smaller bars or elements (mil size) should be read closer to the unit whereas larger bars or elements (mil size) should be read farther from the unit.
5. When the bar code is successfully decoded, the decode LED lights green and the terminal beeps.

## ***Sample Bar Code***

You can use the following bar code to verify decoding:

**Sample 128**

## ***Scanning Positions***

The aiming beam must be aimed across the entire bar code to provide you with the best scanning performance. The aiming pattern is smaller when the terminal is held closer to the code and larger when the terminal is held farther from the code. Symbologies with smaller bars or elements (mil size) should be read closer to the unit whereas larger bars or elements (mil size) should be read farther from the unit.

## System Settings

### Overview

Customized settings are available on the System Settings menu. Tap  > **Settings** and the settings screen opens.

Icon		Description
Bluetooth		Configures the Bluetooth radio. See <a href="#">Enabling the Bluetooth Radio</a> on page 9-1.
Clock & Alarms		Set the system clock, date, time and schedule alarms. See <a href="#">Clock &amp; Alarms</a> on page 7-2.
Lock		Password protect the terminal to limit access to the terminal.
Sounds & Notifications		Set the sound volume, enable or disable sounds for specific actions, set sound parameters for system notifications and enable or disable vibrator notification.
Home		Customize the look and the information displayed on the Home screen.
Connections		Establishes network connections settings. See <a href="#">Connecting the Dolphin 6100-USB Communication Cable</a> on page 8-1.
Personal		Customizes buttons, and set SIP options. See <a href="#">Personal Menu</a> on page 7-3.

Icon		Description
System		Adjusts system settings. See <a href="#">System Menu</a> on page 7-7.

## Clock & Alarms

The Clock & Alarms settings can be accessed from the Home screen or the Settings Menu.

1. On the Home screen, tap the line that displays the time and date

OR

Tap  > **Settings** > **Clock & Alarms**,

2. The Clock Settings screen appears. This setting sets the system clock. All scheduled items run according to this setting.

Tap the arrow to the right of the time zone to open the drop down menu. Select the appropriate time zone from the menu. Set the correct time and date in the remaining fields and tap **OK** to save.

---

## Personal Menu

To access the Personal Menu, tap  > **Settings** > **Personal**. The screen opens displaying the Personal Menu.

Icon		Description
Buttons		Program the side buttons to perform specific tasks. See <a href="#">Buttons</a> on page 7-3.
Owner Information		Enter your contact information (e.g., name, company, address, telephone number and E-mail address).
Voice Command		Tap this icon to set up items that are voice enabled.

## Buttons

The Buttons setting programs certain keyboard buttons to launch applications or execute commands.

---

## Changing Button Assignments

1. Tap  > **Settings** > **Personal**  > **Buttons** .

*Note: The buttons that appear on this window are the only buttons that can be programmed via the Buttons setting. You cannot add buttons to this window.*

2. To change button assignment, tap on the name of the button in the **Button** column, and then select a program or command in the **Assign a program** drop down list.
3. Tap **OK** to save.
4. Press the button to verify that the program is launched or action performed.

### Available Applications

The **Assign a program** list contains the applications installed on the terminal. If there is a program installed that you would like to see in this list, paste a Shortcut to the program in the \\Windows\\Start Menu\\Programs folder. For instructions about creating shortcuts, see [Using File Explorer](#) on page 7-5.

### Additional Functions

The **Assign a program** list also contains the following commands:

Command	Description
<Context Menu>	Performs the same function as tap-and-hold to open the context menu for the control.
<Input Panel>	Opens the soft input panel.
<Left Softkey>	Opens the menu or performs the action displayed on the left side of the Command bar.
<Scan1>	Activates the scanner/imager.
<None>	Nothing happens when the button is pressed.
<OK/Close>	Performs the same function as tapping <b>OK</b> on the screen.

---

Command	Description
<Right Softkey>	Opens the menu or performs the action displayed on the right side of the Command bar.
<Scan2>	Activates the scanner/imager.
<Rotate Screen>	Changes the screen orientation from portrait to landscape.
<Scroll Down>	Scrolls down in the open application.
<Scroll Left>	Scrolls left in the open application.
<Scroll Right>	Scrolls right in the open application.
<Scroll Up>	Scrolls up in the open application.
<Start Menu>	Opens the Start menu.

### Using File Explorer

If you do not see the program listed, you can either use File Explorer to move the program or ActiveSync on the workstation to create a shortcut to the program and place the shortcut in the Start Menu folder.

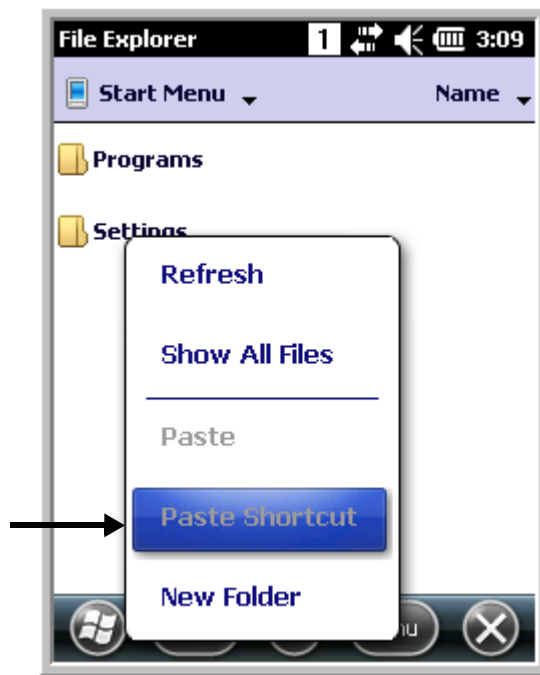

*Note: We recommend that you Copy and Paste Shortcut so that you do not alter your program configurations by accident. Using Copy and Paste Shortcut (as opposed to Cut and Paste) ensures that the program files remain where they need to be for the system to find them to perform system functions.*

1. Tap  > **File Explorer** , and navigate to the program (**My Device > Program Files**).

2. Tap and hold on the program, then tap **Copy** on the pop-up menu.

3. Navigate to the Windows folder and open the Start Menu (**My Device > Windows > Start Menu > Programs**), tap and hold a blank area of the window, and tap **Paste Shortcut** on the pop-up menu.

*Note: If there is no blank space available in the window, tap on **Menu > Edit > Paste Shortcut**.*

4. Tap  to verify that the program now appears on the Start menu.

---

## System Menu

The System menu enables you to verify and sometimes alter system parameters. To access the System menu, go to  > **Settings** > **System**. Tap the appropriate icon to open that system setting.

Icon		See Page
About		See <a href="#">About</a> on page 7-8.
Backlight		See <a href="#">Backlight</a> on page 7-8.
Power		See <a href="#">Power</a> on page 7-12.
Certificates		See <a href="#">Certificates</a> on page 7-9.
Customer Feedback		See <a href="#">Customer Feedback</a> on page 7-9.
Encryption		See <a href="#">Encryption</a> on page 7-10.
Error Reporting		See <a href="#">Error Reporting</a> on page 7-10.

Icon		See Page
External GPS		See <a href="#">External GPS</a> on page 7-10.
Managed Programs		See <a href="#">Managed Programs</a> on page 7-11.
Program Buttons		See <a href="#">Program Buttons</a> on page 4-4.
Memory		See <a href="#">Memory</a> on page 7-11.
Regional Settings		See <a href="#">Regional Settings</a> on page 7-13.
Remove Programs		See <a href="#">Remove Programs</a> on page 7-14.
Screen		See <a href="#">Screen</a> on page 7-15.
Task Manager		See <a href="#">Task Manager</a> on page 7-16.

## About

The About system setting displays specific information about the terminal. It contains three screens:

**Version Screen** Displays the information about the software, operating system, and processor.

**Device ID Screen** Displays the information the terminal uses to identify itself to other devices. It can be important to know this information if the Dolphin terminal is going to be part of a networked system of devices.

**Device name:** Displays the system's default name. (This is the name used by ActiveSync.)

**Description:** Displays the description of the device ID.

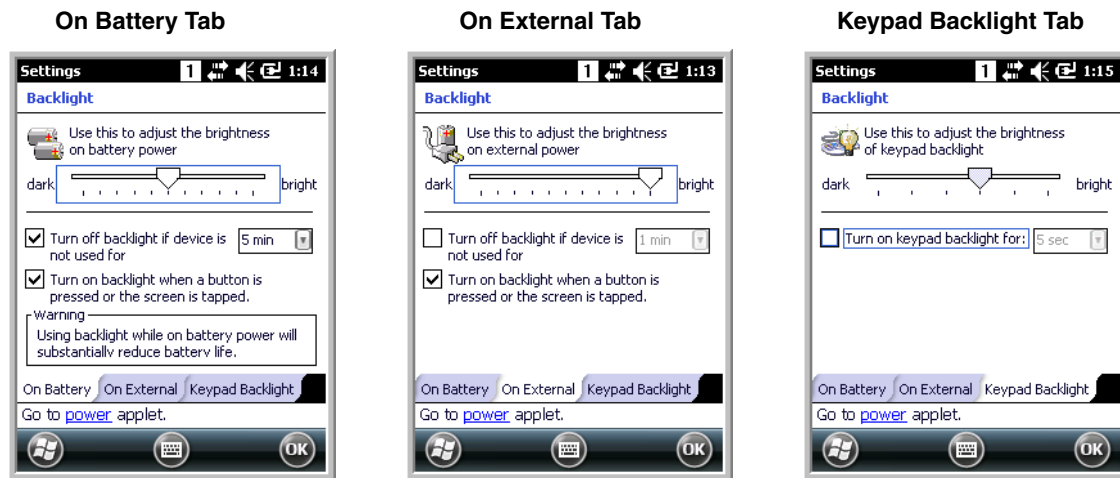

**Copyrights Screen** Displays important copyright information.

## Backlight

The Backlight system setting enables you to customize backlight functionality for the display. The backlight for the color display is user-defined. The Backlight system setting screen contains three tabs: Battery Power, External Power, and Brightness.

Tap  > **Settings** > **System** > **Backlight**.

The **On Battery** tab determines the backlight timeout when the terminal is running on battery power. The **On External** tab determines the backlight timeout when the terminal is running on external power. The options on the **On Battery** and **On External** tabs are the same.

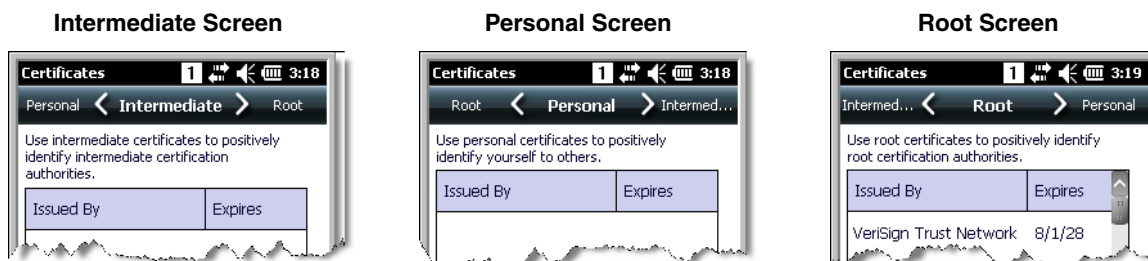

**Turn off backlight:** Select how many minutes you want to elapse before the backlight automatically turns off.

**Turn on backlight:** Select this option if you want the backlight to turn on when the button is pressed or the touch screen is tapped.

The **Keypad Backlight** tab determines the backlight intensity. Move the slider to set the intensity of the backlight. The default is 4.

## Certificates

Certificates shows you the certificates that are recognized by the operating system. It contains three screens.

## Customer Feedback

Customer Feedback gives you the option to participate in the Microsoft Customer Experience Improvement Program.

---

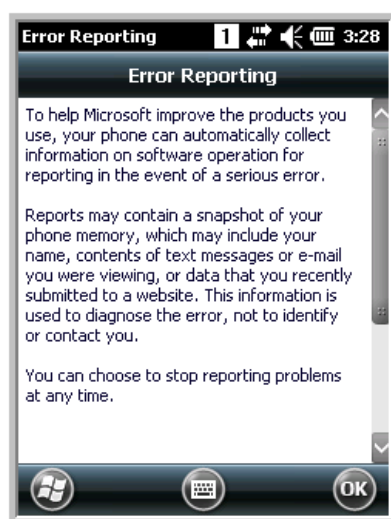

## Encryption

Encryption gives you the option of encrypting files placed on storage cards so that those files cannot be read by any other device.

## Error Reporting

Error Reporting gives you the option of enabling or disabling the error reporting function of Windows Embedded Handheld 6.5.

## External GPS

External GPS determines which port a third-party GPS software application can use to access the GPS receiver.

### Battery Power Tab

### External Power Tab

### Brightness Tab

*Note: You need the installation parameters from the GPS manufacturer to configure the connection.*

---

## Managed Programs

Managed Programs are a list of programs that are managed if enrolled to enterprise domain. Managed Programs is the client-side that works with the server product System Center Mobile Device Manager (MDM). MDM consists of MDM Gateway Server and one or more computers that run MDM Device Management Server; MDM Enrollment Server; and Microsoft SQL Server® 2005 databases.

It lets system administrators:

- provide an authenticated connection to LOB applications, managed Group Policy, and application packages.
- use Group Policy and software packages to manage the enrolled Windows phones (enforce policy, wipe devices, etc.).
- manage the requests for and retrieving of certificates for devices and for creating the Active Directory® Domain Service objects that represent these devices. By using these objects, you can manage the devices as if they were members of a domain.

## Memory

The Main tab of the memory applet shows the capacity and usage of the Storage and Program portions of the Flash file system. The Storage portion indicates the total storage of an installed SD card. When the Program portion becomes too full, you can use the Task Manager to remove any unnecessary tasks.

### Main Screen

This screen displays the usage statistics of the flash memory.

### Storage Card Screen

This screen displays the current capacity and usage statistics of the selected memory type: Storage Card.

**Total storage card memory** = The total MB of memory capacity of Storage Card.

**In use** = The MB currently being used.

**Free** = The MB that is still available for use.

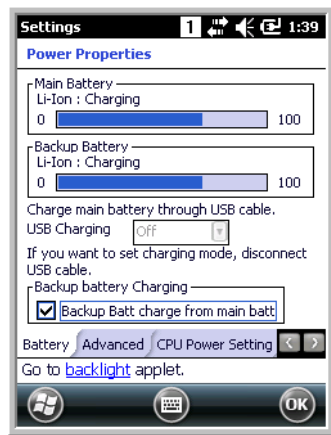

**Storage Card**—You can install one memory card in Dolphin terminals (see [Installing Memory Cards](#) on page 3-9). If a storage card is installed in the terminal, you can see capacity and usage statistics for the card. Data stored on the SD card is not affected when the operating system is upgraded. Autoinstall programs, for example, are stored in \\Honeywell\\Autoinstall so that they are always installed after an operating system upgrade or factory reset. Contact a Honeywell technical support representative for more information on how to perform a factory reset. For contact information, see [Technical Assistance](#) on page 12-1.

## Power

Power system settings contains four tabs: Battery, Advanced, CPU Power Setting, and Wakeup Source.

Tap  > **Settings** > **System** > **Power**.

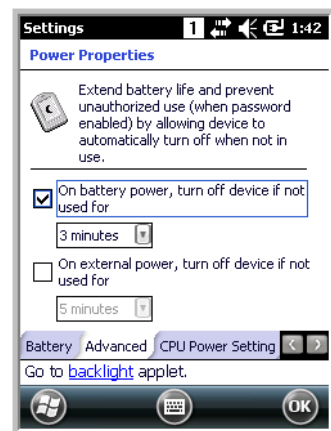

### Battery Tab

The battery tab displays the power level status of the main battery and the status of the backup battery. You may also turn on/off the capability to charge the main battery using the USB cable.

*Note: The Backup Battery gauge registers either 0% or 100%. The percentage is not an indication of the level of charge remaining on the backup battery. An installed and functional battery registers 100%. A total discharge or a battery error registers 0%.*

### Advanced Tab

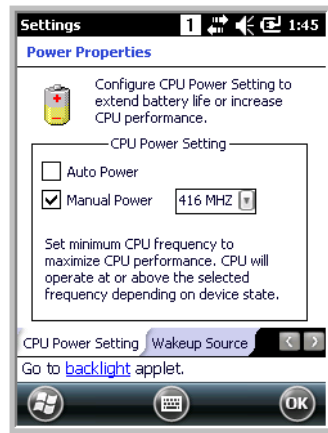

Determines power time-outs.

For **On battery power**, select from the drop-down list, the number of minutes of inactivity you want to pass before the terminal powers off when running on battery power.

For **On external power**, select from the drop-down list, the number of minutes of inactivity you want to pass before the terminal powers off when running on external power.

## CPU Power Setting Tab

Allows you to configure the CPU power setting to extend the battery life or to increase the CPU performance.

Choose either Auto Power or Manual Power. Selecting Manual Power allows for either 104, 416, or 624 MHZ. The CPU operates at or above the selected frequency depending on the terminal's state.

## Wakeup Source Tab

Determines when the terminal wakes up. You may select the incidences when the terminal wakes by checking the appropriate box.

*Note: When the terminal “powers off”, it enters [Suspend Mode](#) (see page 3-16).*

## Regional Settings

Regional Settings enables you to customize the appearance and formatting to your geographic region. Specifically, you can customize numbers (i.e., number of decimal places allowed), currency (i.e., using the \$ or € symbol), time, and date. These specifications apply to all screens, including the Home screen. The Region tab displays an overview of the region selected in the drop-down list at the top.

The terminal is loaded with a number of pre-programmed regional settings. Select one from the list and the results appear on the screen. To see specific settings or to change a specific setting, tap on one of the tabs, make the change, and tap **OK** to save it.

---

## Remove Programs

Remove Programs enables you to remove programs installed on the terminal. Any program (usually CAB or DLL files) stored in the **\\Honeywell\\Autoinstall** folder on the storage card re-installs after a software upgrade or a factory reset. If a program is manually removed using the **Remove Programs** application, the program does not re-install on a hard or soft reset.

*Note: A program (file) does not automatically install if it is added to the \\Honeywell\\Autoinstall folder on the storage card and a hard or soft reset is performed. For information on program installation, see [Installing Additional Software](#) on page 8-11.*

For information about the system resets, see [Resetting the Terminal](#) on page 3-15. See Honeywell support for more information on how to perform a factory reset.

1. Tap **Remove Programs**. In the list, select the program you want to remove.

2. Tap **Remove**. The following message appears:

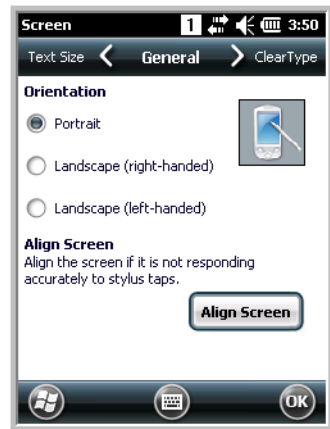

3. Tap **Yes**. Wait while the program is removed.
4. Verify that the program no longer appears in the list.

---

## Screen

The Screen system setting contains three screens: General, Clear Type, and Text Size.

### General Screen

#### Orientation

The General screen enables you to set the dynamic screen rotation. Three choices of screen orientation are supported: Portrait, Landscape (right-handed), and Landscape (left-handed).

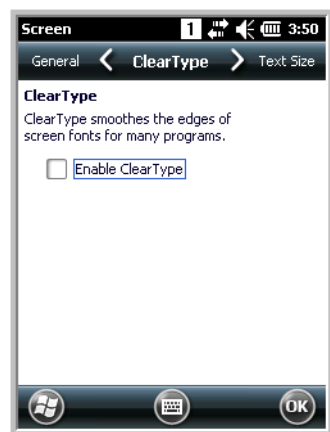

#### Align Screen

The General Tab also allows you to re-align the screen. You need to re-align the screen if tapping buttons or icons with the stylus no longer seems to work appropriately.

Tapping **Align Screen** brings up the align screen window where you are guided to tap a target several times. This recalibrates how the touch screen receives input.

- Alignment should always be performed with a stylus designed for touch panel applications. The small point is required for accurate calibration.
- Press the stylus firmly into the center of the cross-hair target once and release. Do not “double-tap” the target.

### ClearType Screen

The display supports ClearType font rendering, which is a Microsoft technology that dramatically increases the readability of text on LCD displays.

To enable ClearType font rendering, select **Enable ClearType** and tap **OK**.

For more information about ClearType font rendering, visit: [www.microsoft.com/typography/WhatIsClearType.mspx](http://www.microsoft.com/typography/WhatIsClearType.mspx).

## Text Size Screen

The Text Size screen enables you to perform font scaling within certain views of the:

- Home screen,
- Contacts,
- Calendar,
- Messaging, and
- Tasks.

Font scaling means that you can increase or decrease the point size of the font on application windows.

To change the font size, move the slider toward **Smallest** or **Largest**. The Example text changes to reflect the font change. Tap **OK** to save the new font size setting.

## Task Manager

The Task Manager provides information about applications and processes running on your mobile computer. You can use the Task Manager to monitor the memory and CPU usage of specific applications and processes. Check the Task Manager when you are receiving out of memory errors or when the mobile computer is running slowly.

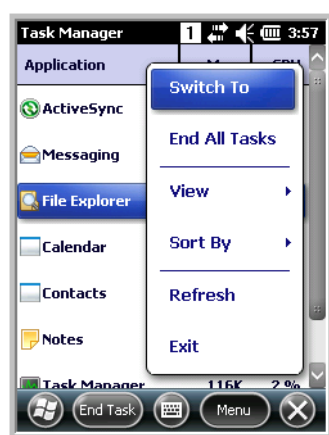

---

## Using the Task Manager

### Applications

To view the status of the programs running on your mobile computer, tap the **Menu** button at the bottom of the screen, then tap **View > Applications**.

From the application list, you can:

- Tap and hold on an application, then tap **Switch To** on the pop-up menu.
- Tap and hold on an application, then tap **End Task** or **End All Tasks** on the pop-up menu.

*Note: Anytime you stop a running program, it frees up memory. To free up memory, return to the running program, save your data, and close the application.*

### Processes

To view information about the processes running on the mobile computer, tap the **Menu** button at the bottom of the screen, then tap **View > Processes**.

---

## Communication

### Connecting the Dolphin 6100-USB Communication Cable

To facilitate USB communication between the Dolphin terminal and the host workstation, you may connect your unit to a host by using either the optional Dolphin 6100-USB Communication Cable or HomeBase. If you use the Communication Cable, slide the cable unit onto the bottom of the terminal lining up the terminal's I/O connector with the cable unit's connector.

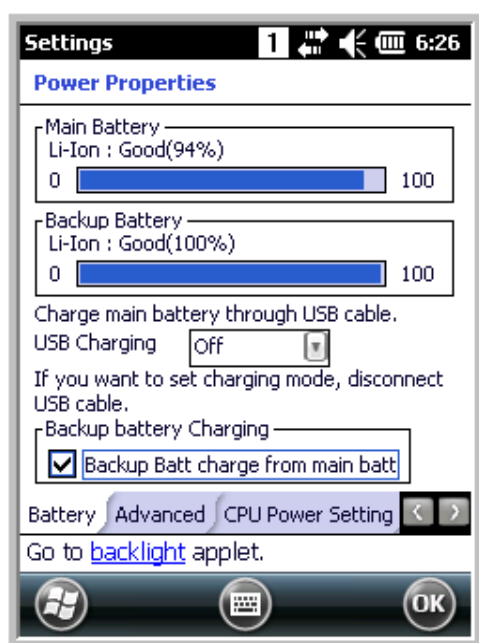

### Charging Terminal with USB Cable

Not only can you communicate between the terminal and the host using the Dolphin Charging/Communication cable, but you can also trickle charge the terminal. The preferred charging method, however, is using the supplied power cord and plugging the unit into the wall. To charge the main battery using the USB cable:

1. Disconnect the cable and select  > **Settings** > **System** > **Power**. The default setting is Off.

- 
2. Select the USB charging option (100mA or 500mA). If you do not disconnect the cable, the option will be grayed out.

3. Re-connect the cable.

---

## Connections Menu

The Connections system setting provides access to the terminal's various wireless communication options.

Icon		Tapping this icon...
Connections		Opens Microsoft's connections manager.
Dolphin Wireless Manager		Manages the wireless radios installed in the terminal. See <a href="#">Dolphin Wireless Manager</a> on page 8-6. <i>Note: The Dolphin Wireless Manager icon may not appear on the Connections menu on terminals running Microsoft Windows Embedded Handheld 6.5 Classic. For information on how to access the <a href="#">Dolphin Wireless Manager</a>, see page 8-6.</i>
Domain Enroll		Opens the Enrollment screen for connecting your phone with company resources. <i>Note: System administrator password is required for domain enrollment.</i>
USB to PC		Enables advanced wired USB to PC communication via sync software. See <a href="#">Connecting and Synchronizing the Terminal and Workstation</a> on page 8-9.
Network Cards		Manage Network card settings.

*Note: All server-assigned IP addresses use Dynamic Host Configuration Protocol (DHCP).*

---

## ***Connections Manager***

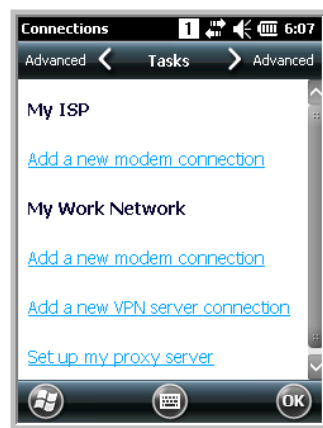

Microsoft's Connections Manager sets up multiple network connections to Internet Service Providers (ISPs) via external modem.

### **Do NOT enter connection parameters in the Connections Manager if:**

- you are using one of the on-board wireless radios to connect to a network. The Dolphin terminal uses the settings from each radio's configuration utility to connect. The connections manager is used primarily to setup WAN modem dial up connections.
- you are using Wireless Zero Config. By default, WZC is disabled on Dolphin terminals.

### ***To Access the Connections Manager***

Tap  > **Settings** > **Connections**  > **Connections** .

## ***Tasks***

The Tasks screen enables you to initially configure, and then manage network settings when using a modem. Select an item in this list and then complete the setup screens that follow with the appropriate information for your network.

### ***My ISP***

The links under this heading enables you to add and manage modem connections to an ISP. To complete the setup screens, obtain the following information from your ISP:

- ISP dial-up access telephone number
- Username
- Password
- TCP/IP settings

### ***My Work Network***

These links enable you to establish the following connections types:

- Modem
- Virtual Private Network (VPN)

- Proxy server connection

*Note: If you are connected to your ISP or private network during synchronization, the terminal should download the proper proxy settings during synchronization with the workstation. If these settings are not on your workstation or need to be changed, ask your ISP or network administrator for the proxy sever name, server type, port, type of Socks protocol used, and your user name and password.*

To complete the setup screens, obtain the network parameters from your system administrator.

### *Modify an Existing Connection*

**Manage Existing Connections** appears on the Connections tab after at least one network connection has been established.

Tap **Manage Existing Connections** on the Horizontal scroll and follow the setup screens.

### **Advanced**

The Advanced screen enables you to select the default network, dialing rules, and IP address exceptions for modem connections.

*Note: You should not need to change Advanced settings because most ISPs now use DHCP addresses.*

---

## ***Dolphin Wireless Manager***

The Dolphin Wireless Manager provides a centralized interface that enables and disables all the on-board radios. Each radio has its own configuration program. The Dolphin Wireless Manager also provides shortcuts to the configuration utilities for each radio.

Tap  on the Home screen to access the **Dolphin Wireless Manager**.

OR

1. Tap once on the Title bar to access the Horizontal Scroll bar.

2. Tap  .

3. Select, “Dolphin Wireless Manager”.

---

## Dolphin Wireless Manager Window

## Enabling the Radios

1. Tap  on the Home screen to access the **Dolphin Wireless Manager**.

2. Tap anywhere inside the rectangle of the radio you want to enable.
3. The radio begins activating.
4. When the radio is activated (i.e., transmitting a signal), the **OFF** button changes to **ON**.

*Note: If applicable, information about the radio appears in the rectangle.*

---

## Accessing Radio Configuration Utilities

Each radio has its own configuration utility that you can access by tapping **Menu** on the tile bar.

### Radio Type

#### 802.11/b/g

### Menu Option

Tap **WLAN Settings** and the Honeywell WLAN Security Supplicant opens. The *Honeywell WLAN Security Supplicant User's Guide* is available for download from the Dolphin 6100WEH product page at [www.honeywellaidc.com](http://www.honeywellaidc.com).

#### Bluetooth

Tap **Bluetooth Settings** and the Bluetooth Settings open. For details, see [Working with the Bluetooth Radio](#) on page 9-1.

---

## Network Cards

The Network Cards screen allows you to set and configure the type of Network Adapter the Network card in the terminal uses. You can modify the adapter settings (e.g., Name Servers or IP address) by tapping on the adapter type or highlighting the adapter and tapping **Edit** at the bottom of the screen.

## Connecting and Synchronizing the Terminal and Workstation

To synchronize data between the terminal and the workstation, ActiveSync (version 4.5 or higher) or Windows Mobile Device Center must be installed and configured for the appropriate communication type on the host workstation (Windows-based PC) and the Dolphin terminal. Dolphin terminals ship with ActiveSync already installed. Therefore, if ActiveSync is already installed on the host workstation, you just need to connect the Dolphin terminal to the host workstation (via Dolphin peripheral) to initiate communication.

If ActiveSync (4.5 or higher) or Windows Mobile Device Center is not installed on the host workstation, you can download and install the most current version of the software from the [Microsoft Web site](http://go.microsoft.com/fwlink/?LinkId=147001) (<http://go.microsoft.com/fwlink/?LinkId=147001>).

*Note: ActiveSync on your Dolphin terminal works with Windows Mobile Device Center on host workstations running Windows Vista or Windows 7 and with ActiveSync on host workstations running Windows XP. For detailed information on ActiveSync and WMDC visit the [Microsoft Windows Phone Web site](#).*

*When communicating via ActiveSync or Windows Mobile Device Center, your terminal is designed to be connected to the host workstation with a communication peripheral sold/manufactured by Honeywell, such as the charge/communication cable. Use of any peripheral not sold/manufactured by Honeywell may cause damage not covered by the warranty.*

## Capabilities

- Back up and restore your device data.
- Copy (rather than synchronize) files between your device and workstation.
- Control when synchronization occurs by selecting a synchronization mode. For example, you can synchronize continually while connected to your workstation or only when you choose the synchronize command.

- 
- Select which information types are synchronized, controlling how much data is synchronized. For example, you can choose how many weeks of past appointments you want synchronized.

## **Communication Type**

The Dolphin 6100 supports the following type of communication via ActiveSync through its [DC Power Jack](#) (see page 3-11) on the bottom panel:

**USB**                      The USB Communication/Charge cable and hardware peripherals allow the Dolphin terminal to communicate with a workstation through a USB port or to a network through a USB hub. The Dolphin terminal supports full-speed USB communication (USB 1.1); maximum data transfer rate is 12 Mbps. The Dolphin terminal defaults to USB communication out of the box.

## **Hardware Requirements for Setup**

- Dolphin communication peripheral (e.g., HomeBase, eBase, USB Communication/Charge Cable) and power supply.

## **Software Requirements for Communication**

- ActiveSync (v4.5 or higher) or Windows Mobile Device Center installed and configured on the host workstation (PC), see [Setting Up the Host Workstation](#) on page 8-10.  
*Note: ActiveSync or Windows Mobile Device Center must be setup on your workstation before you initiate synchronization from the terminal for the first time.*
- Windows 98 Second Edition, Windows Me, Windows 2000, Windows NT (4.0 SP6 or higher), Windows XP, Windows Vista, and Windows 7 operating systems.

## **Setting Up the Host Workstation**

To synchronize data between the terminal and the workstation, ActiveSync (v4.5 or higher) or Windows Mobile Device Center must be configured for same communication type on both the host workstation and the Dolphin terminal.

### *ActiveSync*

Verify that ActiveSync is configured to use the appropriate communication type.

1. In the ActiveSync window on your workstation, select **File > Connection Settings**.
2. Check the box next to “Allow USB connections”.
3. Select **COM1** from the drop down menu.

## **Connecting the Dolphin Terminal to the Host Workstation**

After setting up both the workstation and the terminal:

1. Connect the Dolphin terminal to the workstation using a Dolphin communication peripheral.
2. ActiveSync or Windows Mobile Device Center should open and connect automatically to the Dolphin terminal.

---

## ***Synchronizing with the Host Workstation***

After setup, synchronization begins automatically whenever the terminal's mechanical connector connects to a Dolphin peripheral that is connected to a host workstation with ActiveSync or Windows Mobile Device Center installed. For additional information visit the [Microsoft Phone Web site](http://go.microsoft.com/fwlink/?LinkId=147001) (<http://go.microsoft.com/fwlink/?LinkId=147001>).

## ***Exploring the Terminal from the Workstation***

### *ActiveSync*

1. Open the main ActiveSync window (on the desktop).
2. Click **Explore**. This opens the Mobile Device folder for the terminal in Windows Explorer.
3. The Dolphin terminal is now treated as a mass storage device, and transferring files is as simple as dragging and dropping or copying and pasting.

### *Windows Mobile Device Center*

1. Open Windows Mobile Device Center (on the desktop).
2. Click **File Management**. This opens the Mobile Device folder for the terminal.
3. The Dolphin terminal is now treated as a mass storage device, and transferring files is as simple as dragging and dropping or copying and pasting.

## ***Installing Additional Software***

Dolphin terminals ship with the operating system, radio drivers, and custom Honeywell software already installed. These are the default programs that install when your terminal first boots up. You can install additional software programs to the terminal provided that the following parameters are met:

- The software program was created for a Windows Embedded Handheld 6.5 device.
- The terminal has enough memory to store and run the program.
- The program has an EXE, CAB, or DLL extension.

When selecting programs, verify that the program and version of the program are designed for the Windows Embedded Handheld 6.5 and the terminal's processor. You can verify your processor by tapping

 > **Settings > System > About > Version**. Make a note of the information in the **Processor** field.

To install additional software, you can use the communication options described in this chapter.

- [Adding Programs Using ActiveSync or Windows Mobile Device Center on page 8-11](#).
- [Adding Programs Using the Internet on page 8-13](#).

## ***Adding Programs Using ActiveSync or Windows Mobile Device Center***

Generally, software for Windows Embedded Handheld devices must be installed to the host workstation first, then transferred to the Dolphin terminal.

*Note: An active Microsoft ActiveSync or Windows Mobile Device Center connection between a host workstation and the Dolphin terminal is required to add programs. For additional information, see [Connecting and Synchronizing the Terminal and Workstation on page 8-9](#).*

- 
1. Download the program to the workstation from either the Internet or the install CD. You may see a single \*.exe or setup.exe file, a \*.cab file, or a \*.dll file.

*Note: There may be several versions of files for different device types and processors. Select the file that matches the terminal's processor.*

2. Read any installation instructions, Read Me files, or documentation that comes with the program. Many programs provide special installation instructions.
3. Connect the terminal to the workstation via a Dolphin communication peripheral.

### **If the File is an Installer (\*.exe or \*.setup.exe)**

An installer program is one that installs on the workstation and the terminal simultaneously; one process installs to both devices.

1. On the workstation, double-click the \*.exe or setup.exe file. The installation wizard begins.
2. Follow the directions on the workstation screen. The installation process includes transferring the software to the Dolphin terminal.

### **If the File is Not an Installer**

Some programs cannot be installed on PCs because they are designed exclusively for Windows Embedded Handheld devices. In these cases, the appropriate files must be stored on the host workstation and transferred to the terminal via ActiveSync Explore or Windows Device Mobile File Management.

*Note: You know that the program is not an installer because an error message stating that the program is valid but designed for a different type of computer appears when you try to install the program on the workstation.*

1. If you cannot find any installation instructions for the program in the Read Me file or documentation, do one of the following:
  - a. Open **ActiveSync** and click **Explore**, or
  - b. Open **Windows Mobile Device Center** and click **File Management**
2. On the workstation, navigate to the workstation folder containing the program file(s). Copy and paste the file(s) into the **Program Files** folder on the terminal.
  - If you want the program to be part of the Autoinstall that occurs after a factory reset or software upgrade, paste the program file(s) in both the \\Honeywell\\Autoinstall folder on the storage card and the \\Honeywell\\Autoinstall folder on the device.

*Note: Contact a Honeywell technical support representative for information on how to perform a factory reset. See [Technical Assistance](#) on page 12-1. or go to [www.honeywellaidc.com](http://www.honeywellaidc.com).*

3. On the terminal from the  screen, tap **File Explorer**, navigate to the folder where the program is located.
4. Tap on the program file to start the installation.
  - If you copied the file to the \\Honeywell\\Autoinstall folder, you can perform a Soft Reset (Press the **Reset** button using the stylus) to install the program.

---

## **Connecting the Terminal to a Wireless Network**

You connect the terminal to a wireless network through the on-board radio (802.11b/g, Bluetooth). Each radio has its own configuration utility and requires specific information about the wireless network to connect. Successful connection depends on your network infrastructure about which you will need specific information from your network administrator.

### **WLAN (802.11b/g)**

The Dolphin 6100 has a 2.4 GHz 802.11b/g WLAN (Wireless Local Area Network) radio. The radio is interoperable with other 802.11 b/g, Wi-Fi compliant products including access points (APs), workstations via PC card adapters, and other wireless portable devices. By default, the 802.11b/g radio is disabled after each factory reset. The next step is to configure the connection parameters of the radio to connect to a wireless network.

### **WLAN Radio**

The WLAN radio is configured in the Honeywell WLAN Security Supplicant, which you access by tapping the program icon in the task tray near the bottom of the touch screen. For complete configuration instructions, download the *Honeywell Secure Wireless (SWC) Client User's Guide* from [www.honeywellaidc.com](http://www.honeywellaidc.com). A link to this guide appears on the Dolphin 6100 product page.

## **Adding Programs Using the Internet**

When you have established a network connection, you can access the Internet and download additional software programs.

*Note: When selecting programs, verify that the program and version of the program are designed for Windows Embedded Handheld and the terminal's processor. You can verify your processor by tapping*

*> Settings > System > About > Version. Make a note of the information in the Processor field.*

1. Open Internet Explorer and navigate to the program's location. You may see a single \*.exe or setup.exe file, or several versions of files for different device types and processors.
2. Select the program version that matches your Dolphin terminal and processor.
3. Read any installation instructions, Read Me files, or documentation that comes with the program. Many programs provide special installation instructions.
4. Download the program to the terminal directly from the Internet. You would normally store the program in the \Program Files folder unless another location is required by the program.
5. On the terminal, tap the installer file: e.g., \*.exe or setup.exe file.
6. The installation wizard for the program begins.
7. Follow the directions on the screen to complete the installation.

## **Software Upgrades**

Contact a Honeywell technical support representative for information on available software upgrades for your Dolphin terminal, see [Customer Support](#) on page 12-1. or go to [www.honeywellaidc.com](http://www.honeywellaidc.com).

To prevent data loss, back up all user data to an SD card or external memory device before performing an upgrade.

*Note: An active Microsoft ActiveSync or Windows Mobile Device Center connection between a host workstation and the Dolphin terminal may be required for some types of software upgrades. For additional information, see [Connecting and Synchronizing the Terminal and Workstation](#) on page 8-9.*

## Working with the Bluetooth Radio

### Enabling the Bluetooth Radio

You enable the Bluetooth radio in the [Dolphin Wireless Manager](#) (see page 8-6).

1. Tap  on the Home screen to access the **Dolphin Wireless Manager**.

2. Tap anywhere inside the Bluetooth rectangle and Bluetooth begins activating.

3. When the radio is activated (i.e., transmitting a signal), the **OFF** button changes to **ON**.

Now, the Bluetooth radio is transmitting a signal. Additional text in the Bluetooth section tells information about the Bluetooth radio. "Visible" and "Not visible" indicates whether the Bluetooth radio is discoverable or not discoverable by other Bluetooth devices.

Now, you can connect to other transmitting and discoverable Bluetooth devices (see page [9-2](#)).

To make the terminal discoverable, [see page 9-5](#).

---

## Pairing and Trusted Devices

The terminal does support pairing. Pairing happens during general connection setup. Paired devices are "trusted" devices. This means that there is unrestricted access to all services (including services that require authorization and authentication).

A connection can exclude pairing. A device that is connected to the terminal but not paired with it is considered an untrusted device. Content can still be passed to untrusted devices by requiring authorization with each attempt (for example, with the initialization of a file exchange). The Beam File method of file transfer can be used to pass a file as an untrusted device; see [Transferring Files](#) on page 9-4.

## Connecting to Other Bluetooth Devices

To connect to other bluetooth devices, you need to perform a device discovery, select a discovered device, and then connect to the selected device. Pairing happens as part of the connection process.

1. Make sure the Bluetooth device is in range and set to be discoverable by other Bluetooth devices.
2. In the Dolphin Wireless Manager, tap **Menu > Bluetooth Settings**.

OR

Tap  > **Settings > Bluetooth** .

3. Tap **Add new device**. The terminal begins searching for discoverable Bluetooth devices.

4. Select a device from the list and tap **Next**.

The types of devices in the vicinity of the radio appear in the list of discovered devices.

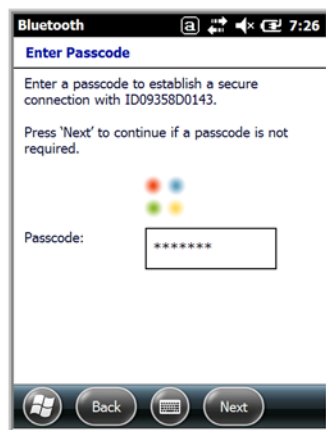

5. You are prompted to enter a passcode.

- If the device has a specific passcode, enter it in the **Passcode** field and tap **Next**.

When attempting to connect to a printer or headset with Bluetooth capabilities, the passcode may default to either 1111 or 0000. If there is no default, consult the device literature for the number.

- If the device does not have a specific passcode, enter one in the **Passcode** field and tap **Next**.

6. The Bluetooth radio tries to connect with the device.

7. If you created a passcode, you will be prompted by the other device to enter the same passcode. Enter the created passcode to establish a paired connection.

If you entered a device specific passcode, you should not have to do anything on the other device.

- 
8. When the connection is complete, a list of matching and supported services on the device appears. Only the services that are mutually supported on both devices appear in the Partnership Settings window.

9. Select the services you want to use and tap **Save**.

The services on the new devices have to be selected or the pairing won't include those services, even though the devices are paired. If services are not selected, you will be continually re-prompted for the passcode from the device.

10. The device appears in the list on the main window.

If you are connecting to a printer or headset, complete any additional steps required by de

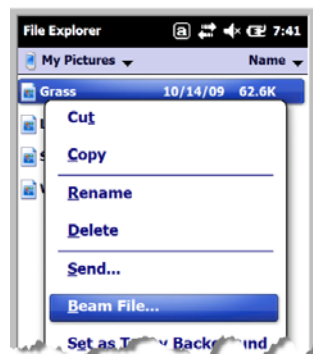

11. After the passcodes have been accepted on both sides, you have a trusted (paired) connection.

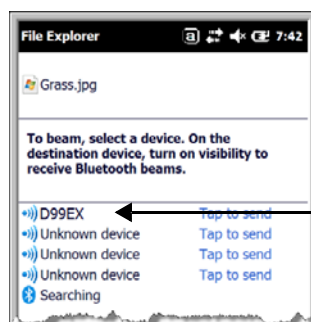

## ***Transferring Files***

1. Tap  > **File Explorer**.
2. Navigate to the file you want to transfer.

3. Tap and hold on the file and select **Beam File** on the popup menu.

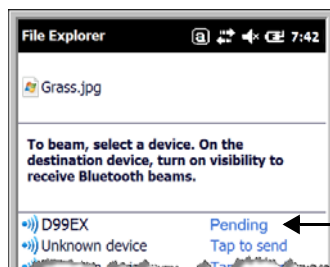

4. The Bluetooth radio begins searching for devices.

When a Bluetooth device is first found, it appears as an Unknown device; the  icon indicates that the device is a Bluetooth device.

As data is retrieved, the device IDs appear in the list.

5. Tap the device to begin sending the selected file.
6. While trying to connect, the selected device reads "Pending".

7. When the file is being transferred, the selected device reads "Sending".

## ***Making the Terminal Discoverable***

By default, the Dolphin terminal is not discoverable, which means that the terminal will not be found by other Bluetooth devices.

---

To make the terminal discoverable, tap **Mode** on the Horizontal scroll. Select **Make this device visible to other devices** and tap **OK**.

## Dolphin HomeBase/eBase Device

### Overview

*Note: The information in this chapter applies to both the Dolphin HomeBase and Dolphin eBase devices unless otherwise indicated.*

As the hub of your Dolphin 6100 system, the Dolphin HomeBase charging and communication cradle supports full-speed USB 1.1 and RS-232 communication with a workstation. The Dolphin eBase is identical to the Dolphin HomeBase except it supports Ethernet communication as well as USB 1.1, and RS-232.

### Communication

The base can communicate via USB or serial RS-232 (or Ethernet for the eBase). Data transmission for USB is up to 12 Mbps. Data transmission for serial RS-232 is up to 115 Kbps.

These bases cannot be physically connected to each other—sometimes referred to as “daisy-chaining”—but can be networked together via serial or USB hubs.

### Battery Charging

The base completes a full charge of a fully depleted main battery pack in an average of 5 1/2 hours. It takes less time if the battery has some charge.

In addition to charging, the base powers the terminal's intelligent battery charging system, which protects the battery from being damaged by overcharging. The terminal senses when a battery pack is fully charged and automatically turns off the charger. If the battery voltage drops below the charge threshold, the charger turns on again to maintain the battery at full capacity. As a result, Dolphin terminals may be stored in the base indefinitely without damage to the terminals, battery packs, or peripherals. For prolonged storage, see [Storage Guidelines](#) on page 3-14. The base can also charge a second battery while the terminal is positioned in the base. See [Charging a Spare Battery](#) on page 10-6.

### Power Supply

The power cable that ships with each terminal also powers the base.

*We recommend use of Honeywell peripherals, power cables, and power adapters. Use of any non-Honeywell peripherals, cables, or power adapters may cause damage not covered by the warranty.*

*We recommend use of Honeywell Li-Ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.*

*Ensure all components are dry prior to mating terminals/batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.*

---

## **Front Panel**

### **Terminal Well**

Place the Dolphin terminal in the terminal well to communicate with a host device, power the terminal, and charge the terminal's battery. Make sure that the device is securely seated.

### **Rubber Feet**

The bottom panel has four rubber feet to stabilize the unit on a flat surface. You can set the base on a dry, stable surface, such as a desktop or workbench near an electrical outlet.

---

## Back Panel

### DC Power Jack

Connect the power cable to this power jack; see [Powering the Dolphin HomeBase Device](#) on page 10-4.

### USB Port

The USB port is full-speed (v1.1). Using the USB cable, you can connect the base to a USB-compliant device to facilitate USB communication to and from the terminal. USB communication occurs through Microsoft ActiveSync (v.4.1 or higher). For more information about ActiveSync setup, see [Connecting and Synchronizing the Terminal and Workstation](#) on page 8-9.

### Serial Port

The serial port supports serial communication between the terminal and another device. Note that the connector is a DB9 Male connector, requiring a female connector on the serial cable. The following four signals are supported:

- Transmitted Data
- Received Data
- Request to Send
- Clear to Send

*Note: ActiveSync is not supported over the serial port.*

### Ethernet Port (eBase only)

Using an Ethernet cable, you can connect the eBase to an Ethernet-compliant device to facilitate Ethernet communication to and from the terminal. This equipment is for indoor use only. The communication wiring is limited to the inside of a building.

---

## Powering the Dolphin HomeBase Device

The terminal requires 5 volts DC input for communication and battery charging; the power adapter on the power cable converts the voltage from the power source to 5 volts DC. Only power adapter cables from Honeywell convert the voltage appropriately.

The same power cable that ships with each terminal can be used to power the base. This cable contains a plug adapter for each geography (US, UK, EU, etc.).

1. Attach the appropriate plug adapter to the power adapter.
2. Plug the power cable into the power source.
3. Plug the connector into the DC power jack on the back panel. The base is now powered.

When a terminal is properly seated, the base powers the terminal, charges the terminal's main battery pack, and launches ActiveSync (see [Connecting and Synchronizing the Terminal and Workstation](#) on page 8-9).

Honeywell recommends that you leave the base connected to its power source at all times, so that it is always ready to use.

## eBase Clamp-on Ferrite Core Installation

We recommend that you install the clamp-on ferrite core included with your Dolphin® eBase on your Ethernet cable. *Installation of the ferrite is required to meet the declared FCC emission levels.*

---

The following illustration shows how to install the ferrite on the cable. It should be placed approximately 1.57 inches (40mm) from the RJ45 plug. The cable should be looped around the core, as shown.

## ***Charging the Main Battery***

The base powers the terminal and fully charges its main battery pack in an average of 5 1/2 hours for a fully depleted battery. It takes less time if the battery has some charge.

As battery packs charge, the charging circuitry follows the two-step charging process (CC-CV) that is recommended for Li-Ion batteries. The process monitors changes in temperature, current, and voltage.

## ***Inserting a Terminal***

1. Install the battery pack in the terminal; see [Install the Main Battery](#) on page 2-1.
2. Power the base; see [Powering the Dolphin HomeBase Device](#) on page 10-4.
3. Slide the terminal into the terminal well making certain that the terminal is seated properly.
4. The battery pack begins charging.

*Ensure all components are dry prior to mating terminals/ batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.*

---

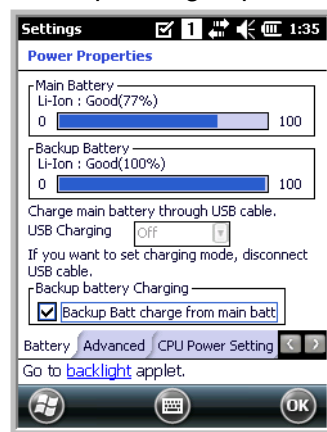

## Charging a Spare Battery

The base can also charge a second battery while the terminal is positioned in the base. The second battery can be inserted in the battery charging well in back of the terminal connection. Place the battery in the well with the label facing up and toward the back of the unit. Angle the battery as shown. Once the connectors engage, the LED lights. If the LED is red, the unit is charging; if it is green, the charge is complete.

## Checking Battery Power

To check battery power while the terminal is operating, tap  > **Settings** > **Power**.

## Technical Specifications

<b>Structural</b>	
<b>Dimensions</b>	5.3 in. high X 4.5 in. wide X 3.1 in. deep (13.5 cm. X 11.4 cm. X 7.9 cm.)

## Dolphin QuadCharger Device

### Overview

The Dolphin QuadCharger device is a four-slot charging station that charges up to four Li-ion battery packs in an average of 5 1/2 hours for a fully depleted battery. It takes less time if the battery has some charge. For more details about charging, see [Battery Charging](#) on page 11-2.

*We recommend use of Honeywell peripherals, power cables, and power adapters. Use of any non-Honeywell peripherals, cables, or power adapters may cause damage not covered by the warranty.*

*We recommend use of Honeywell Li-Ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.*

*Ensure all components are dry prior to mating batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.*

### QuadCharger Device

### Charging Slots

The charger contains four charging slots. Each slot holds one battery. When a battery is placed in a slot, it immediately begins charging and its Status LED lights.

### Status LEDs

A status LED is located at the end of each of the four battery slots. The color of the LED indicates the charge status of the battery in the slot.

<b>Green</b>	The battery has completed its charge cycle and is ready for use.
<b>Red</b>	The battery is charging.

---

## Power Supply Connector

Use this connector to attach the power supply to the charger. The universal power supply accepts input voltages between 90–265 volts.

## Battery Charging

### Charging Process

This charger charges Dolphin 6100 Li-Ion 3300mAh packs in an average of 5 1/2 hours for a fully depleted battery. It takes less time if the battery has some charge. Each charging slot works independently of the other three. As battery packs charge, the charging circuitry follows the two-step charging process (CC-CV) that is recommended for Li-Ion batteries. The process monitors changes in temperature, current, and voltage.

### Temperature

The six-hour charge time applies when batteries are charged within the recommended temperature range of 50° to 95° F (10° to 35°C). Temperature has a significant effect on charging. For best results, battery packs should be at room temperature before inserting in the charger.

When the battery temperature exceeds 40°C, the charger may exceed the stated six-hour charge time. The charger stops charging if the battery temperature is greater than 40°C, but will begin charging again when the battery temperature is less than 40°C.

### Charging Batteries

1. Supply the charger with power.
2. Insert batteries into the appropriate slots.  
The Status LED for each slot turns red to indicate that the battery is properly seated and has begun a charge cycle.

- 
3. When the Status LED turns green, the battery in the slot has completed charging.

### ***Recommendations for Storing Batteries***

To maintain top performance from batteries, follow these storage guidelines:

- Avoid storing batteries outside of the specified temperature range of -4 to 104°F (-20 to 40°C) or in extremely high humidity.
- For prolonged storage, it is recommended that the battery be at a 40% - 50% charge level, be removed from the device, and stored in a controlled temperature environment. Following these recommendations will maximize battery life.

### ***Troubleshooting***

If you encounter problems with the charger, refer to chart below for possible solutions. If problems persist, contact [Product Service and Repair](#) (see page 12-2).

Problem	Issue
The Status LED does not come on when I insert a battery pack into a slot.	Check the power connections to the device; make sure the battery pack is properly seated.

---

## Technical Specifications

<b>Structural</b>	
<b>Dimensions</b>	7.3 in. long X 3.7 in. wide X 2.4 in. high (18.5 cm. X 9.4 cm. X 6.1 cm.)

You can also access product service and repair assistance online at [www.honeywellaidc.com](http://www.honeywellaidc.com).

---

## ***Limited Warranty***

Honeywell International Inc. ("HII") warrants its products and optional accessories to be free from defects in materials and workmanship and to conform to HII's published specifications applicable to the products purchased at the time of shipment. This warranty does not cover any HII product which is (i) improperly installed or used; (ii) damaged by accident or negligence, including failure to follow the proper maintenance, service, and cleaning schedule; or (iii) damaged as a result of (A) modification or alteration by the purchaser or other party, (B) excessive voltage or current supplied to or drawn from the interface connections, (C) static electricity or electro-static discharge, (D) operation under conditions beyond the specified operating parameters, or (E) repair or service of the product by anyone other than HII or its authorized representatives.

This warranty shall extend from the time of shipment for the duration published by HII for the product at the time of purchase ("Warranty Period"). Any defective product must be returned (at purchaser's expense) during the Warranty Period to HII factory or authorized service center for inspection. No product will be accepted by HII without a Return Materials Authorization, which may be obtained by contacting HII. In the event that the product is returned to HII or its authorized service center within the Warranty Period and HII determines to its satisfaction that the product is defective due to defects in materials or workmanship, HII, at its sole option, will either repair or replace the product without charge, except for return shipping to HII.

EXCEPT AS MAY BE OTHERWISE PROVIDED BY APPLICABLE LAW, THE FOREGOING WARRANTY IS IN LIEU OF ALL OTHER COVENANTS OR WARRANTIES, EITHER EXPRESSED OR IMPLIED, ORAL OR WRITTEN, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT.

HII'S RESPONSIBILITY AND PURCHASER'S EXCLUSIVE REMEDY UNDER THIS WARRANTY IS LIMITED TO THE REPAIR OR REPLACEMENT OF THE DEFECTIVE PRODUCT WITH NEW OR REFURBISHED PARTS. IN NO EVENT SHALL HII BE LIABLE FOR INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, AND, IN NO EVENT, SHALL ANY LIABILITY OF HII ARISING IN CONNECTION WITH ANY PRODUCT SOLD HEREUNDER (WHETHER SUCH LIABILITY ARISES FROM A CLAIM BASED ON CONTRACT, WARRANTY, TORT, OR OTHERWISE) EXCEED THE ACTUAL AMOUNT PAID TO HII FOR THE PRODUCT. THESE LIMITATIONS ON LIABILITY SHALL REMAIN IN FULL FORCE AND EFFECT EVEN WHEN HII MAY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH INJURIES, LOSSES, OR DAMAGES. SOME STATES, PROVINCES, OR COUNTRIES DO NOT ALLOW THE EXCLUSION OR LIMITATIONS OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU.

All provisions of this Limited Warranty are separate and severable, which means that if any provision is held invalid and unenforceable, such determination shall not affect the validity of enforceability of the other provisions hereof. Use of any peripherals not provided by the manufacturer may result in damage not covered by this warranty. This includes but is not limited to: cables, power supplies, cradles, and docking stations. HII extends these warranties only to the first end-users of the products. These warranties are non-transferable.

## ***Limited Warranty Duration***

- The duration of the limited warranty for terminals with an integrated imager is one year.
- The duration of the limited warranty for touch screens is one year.
- The duration of the limited warranty for Dolphin HomeBase, Dolphin Mobile Mount, Dolphin ChargeBase, Dolphin Mobile Charger, and Dolphin QuadCharger is one year.
- The duration of the limited warranty for batteries is one year.  
Use of any battery from a source other than Honeywell may result in damage not covered by the warranty. Batteries returned to Honeywell International Inc. in a reduced state may or may not be replaced under this warranty. Battery life will be greatly increased when following the battery instructions in this user's guide.

---

### ***How to Extend Your Warranty***

Honeywell International Inc. offers a variety of service plans on our hardware products. These agreements offer continued coverage for your equipment after the initial warranty expires. For more information, contact your Sales Representative, Customer Account Representative, or Product Service Marketing Manager from Honeywell International Inc., or your Authorized Reseller.

---

**Honeywell Scanning & Mobility**  
9680 Old Bailes Road  
Fort Mill, SC 29707

[www.honeywellaidc.com](http://www.honeywellaidc.com)
